1 September 2016

End date

28 February 2021

Funded under

H2020-EU.1.3.3.

Overall budget

€ 1 809 000

EU contribution

€ 1 809 000

Coordinated by

UNIVERSITA DEGLI STUDI DI
GENOVA

 Italy

Objective

Women with disabilities have more difficulties to find an employment and to integrate in social day life activities than men with disabilities.

This project focuses on the collective of women with disabilities from different perspectives, trying to identify needs and best practices in several EU countries, representing different cultural and socio-economic environments, for the integration and improvement of their quality of life in several respects. By applying a novel analysis method, based on the experience acquired by the exchange of researchers, innovation staff and practitioners in the European area among the participating institutions, the project will identify a set of multi-sectorial research lines, to enhance integration and involvement of this population in the society along several dimensions.

The delimitation of the scope of the project to this sector of the population has several advantages. First, it is the first relevant study at a global scale that is

performed in Europe on this collective. Second, it allows putting into practice and validating a novel social research method, with a strong multidisciplinary approach, with such a well delimited case study. novel potential research lines can be explored in different settings to assess their opportunity and feasibility. Fourth, it will show the impact that this collective may have on a sustainable growth in economy and society, from different respects, by empowering their capacities, so far undervalued. Fifth, it will establish a platform for cooperation among research groups and associations in EU that are aware of the situation of this collective, looking for their synergies. It is worth mentioning that advances on technologies and measures towards a stronger social engagement of disabled people have finally a positive impact also in the whole population as many examples show on how solutions have been transferred to the rest of society in fields such as computer interfaces, ergonomic solutions, etc.
