July 2022, 103 pages

This thesis examines the border disputes between villages that arose between 1943-1960. The demographic change during the transition from the Ottoman Empire to the Republican period led to the emergence of the peasantry as an important category for the Republican regime. Transforming the structure of agricultural production, the economic conjuncture of the post-World War II period led to mechanization and caused an increase in the prices of agricultural products. For this very reason, land disputes among the peasants have escalated significantly. The state apparatus construed economically based land sharing and border demarcation within the scope of the administrative border dispute. This thesis essentially seeks answers to two questions. The first is the methods and factors utilized by the bureaucratic apparatus in determining the borders between villages. The second is to what extent the bureaucratic apparatus was apt to respond to the socio-economic claims of the rural population. Based on these questions, this study attempts to analyze the tension between the administrative concerns of the bureaucratic apparatus and the socio-economic demands of the villagers as rooted in their daily lives. The main method for this study is using the qualitative data analysis method to look at the border detection reports in the republican archives.

Bu tez 1943-1960 yılları arasında ortaya çıkan köyler arası sınır anlaşmazlıklarını incelemektedir. Osmanlı İmparatorluğundan Cumhuriyet’e geçiş sürecindeki demografik değişim, köylülüğün Cumhuriyet rejimi için önemli bir kategori olarak ortaya çıkmasına yol açmıştı. İkinci Dünya Savaşı sonrası dönemin siyasi konjonktürü tarımsal üretim yapılarını dönüştürerek, makineleşme ve tarımsal ürün fiyatlarında artışa sebep olmuştu. Tam da bu sebeple, köylüler arasındaki arazi anlaşmazlıkları ciddi bir biçimde artış göstermişti. Yerelden gelen ekonomik temelli arazi paylaşım ve sınır belirleme talepleri, devlet aygıtı tarafından idari sınır anlaşmazlığı kapsamında değerlendirildi. Bu tez, temel olarak iki soruya cevap aramaktadır. Bunlardan ilki, köyler arasındaki sınırlar belirlenirken bürokratik aygıt tarafından kullanılan metot ve faktörlerin neler olduğudur. Bir diğeri ise, bürokratik aygıtın yerelden gelen sosyo-ekonomik temellere ne ölçüde cevap verebildiğidir. Bu çalışma, bu sorulardan hareketle, bürokratik aygıtın yönetsel kaygılarıyla, köylülerin gündelik yaşamlarına dayandırdıkları talepleri arasındaki gerilimi çözümlenmeye çalışmaktadır. Bunu yaparken, arşive yansıyan sınır tespit tutanaklarının nitel veri analizi yöntemiyle incelenmesi, bu çalışmanın temel metodolojisini oluşturur.

Anahtar Kelimeler: Köy, Sınır, Anlaşmazlık, Topografya, Cumhuriyet Bürokrasisi

ACKNOWLEDGMENTS

It is a pleasure to express my gratitude to everyone who has helped me along the road with my thesis and has shown unwavering support in various ways. First and foremost, I'd like to thank my invaluable advisor, Asst. Prof. Dr. Selçuk Dursun, for his encouragement, patience, motivation, and support for my studies and development as a graduate student. I know this journey would not have been completed without his contributions and guidance. I also want to express my gratitude to the thesis committee members, Prof. Dr. Mehmet Seyitdanlıođlu and Prof. Dr. Ferdan Ergut, for their insightful comments and constructive criticism.

I am incredibly grateful to Prof. Dr. E. Attila Aytekin, who did not withhold his valuable ideas from me, and Dr. Gürer Karagedikli, who also constantly motivates me with short but beneficial hallway conversations in the department. I am also grateful to Prof. Dr. Osman Gümüřcü for not hesitating to share his works on the subject with me.

I am greatly indebted to Ali Askar řahin and Sakine řahin. They have stood by me in every difficulty I have faced in my entire life. Seda Kılıç, who means more than a sister to me, deserves a special thank for making me feel her support at all times. I also owe my sincere thanks to Zeki Dođan, who constantly sheds light on me with his stance in the life. I would also like to thank Serkan Kılıç, Ada Su Kılıç, and her tiny cactus that brought me luck.

I would also like to express my sincere thanks to my esteemed colleagues, Gizem M. Çiftçi, Burak Karakuş, and E. Ozan Yılmaz. They dealt with my moodiness in one room during this process.

Lastly, I owe many thanks to dear friends, each of whom has a special meanings for me, namely, Mevlüt Can Demir, Bedirhan Laçın, Yasemin Türker, Anıl Aşkın, Göksel Baş, F. Burhan Ayaz, and Hüseyin A. Darar. I wholeheartedly appreciate their constant material and moral support, affection, and caring for me all the time.

CHAPTER 1

INTRODUCTION

Prosecutor : “Location: Kızılçullu...in the north of the administrative district...” Sergeant, what do you say? Is this Kızılçullu here?

Sergeant : Well, Mr. Prosecutor, it’s like this. The fountain is right on the border. The side is Sarıçullu, the other side Kızılçullu.

Prosecutor : -So?-

Sergeant : Well, it’s quite simple. Suppose we drew a line between us and the fountain. This side to north is Kızılçullu and the south side Sarıçullu... Sir.

Prosecutor : Meaning ?

Sergeant : Well, If you look at map coordinates... it’ll tell you exactly whether this is Kızılçullu or... Well, we could say Kızılçullu, but it also tends towards Sarıçullu. Being outside the municipal limits, I know this point very well. The municipal map actually marks this...

Prosecutor : Ok.

Sergeant : ... as the exact boundary point...

Prosecutor: Ok. “ Location, Sarıçullu ... in the vicinity of Kavurgalı village...”¹

The peasantry felt the transformative power of industrial development in the 20th century more than any other class within society. The effects of modernity on traditional structures have mainly manifested themselves at the village level. From China to Russia, from Latin America to the Far East, this change in village life has seriously affected political systems. Considering the demographic structure that the Republican regime took over from the Ottoman Empire, we need to understand how this global transformation has affected the Republican administration. In a demographic structure where the villagers make up 80% of the total population, we can understand the administrative and economic nature of the state apparatus more clearly by analyzing village policies.² The emphasis on Populism, created at the

ideological level, strengthens this claim. The Republican regime attached great importance to this issue, as reflected by its enactment of the *Köy Kanunu* (Village Law) in 1924. One issue that this law prioritizes is the determination of village borders. The Republican administration organized the state apparatus in rural space by intervening in the village border disputes. Although the law was issued immediately after the foundation of the Republic, the oldest document I found in the state archives on border disputes belongs to 1943. That is why I chose to begin my analysis in the 1940s. I ended my research in 1960 when the Democratic Party's power comes to an end.

The years between 1943 and 1960 can be considered a transition period in the Republic's history in implementing multi-party politics.³ The increase in the prices of agricultural products in the international market after the Second World War and the acceleration of mechanization in agriculture with the Marshall Plan increased the demand for arable land in rural areas. Because of this demand, the number of disputes over land and natural resources open to common use rose. Democratization and economic pressure on agricultural production shifted the focus of populist policies to villagers and village space.⁴ This thesis aims to determine whether or not the relationship between the Republic and the villagers impacted space through disputes over village borders. This thesis is about how the bureaucratic structure dealt with the need for local areas to share natural resources and what factors were taken into account when drawing administrative lines.

1.1 Methodology

The Grounded Theory, a kind of qualitative research technique, was used in the research process of this thesis. Even though the archival sources are in a relatively standard format, considering the complex and different forms of disagreement, it can be understood why the Grounded Theory, which is an inductive rather than a deductive

³ Sinan Yıldırım, *Türkiye'de Köylülüğün Sosyal Tarihi (1945-1960)* (İstanbul: İletişim Yayınları, 2021), 69–82.

⁴ Şevket Pamuk, *Uneven Centuries* (Princeton&Oxford: Princeton University Press, 2018), 207–12, <https://press.princeton.edu/books/hardcover/9780691166377/uneven-centuries>.

approach, is preferred.⁵ Instead of evaluating archival sources with a pre-existing conceptual perspective, it is a distinctive feature of Grounded Theory that a data set is created by first examining the sources in depth, cross-checking them, and developing a theoretical framework based on this data set. As a result, this technique allows the researcher to dialogue with the research subject constantly. Glasser and Strauss criticize the deductive method in two ways. First, in the conclusion stage of the research, the researcher utilizes the conceptual framework in the previous stages to provide sociological meaning to their empirical data. The researcher is trained to validate another theoretical framework rather than try to make an explanation from the observed data they are working on. Such a conceptual framework, not based on the data set, cannot go beyond being a tacked-on explanation. The second criticism is of sampling. The samples chosen based on a theoretical framework that already existed are speculative because the theoretical framework is in a form that forces itself on the examples, not as a set of ideas that come out of looking at the examples.

For this reason, the Grounded Theory methodology envisages the systematic analysis of the data, the categorization of the concepts encountered in the analysis process, the determination of the relations between these categories, and finally, an explanation constructed from the related categories. This whole related analysis process is called the “Constant Comparative Method.” According to this method, researchers subject the research material to a three-stage coding cycle. In the first cycle, *Open Coding*, even the most minor details of the material are coded to create a less systematic but inclusive code matrix. In the second cycle, the *Axial Coding*, researchers group the code matrices created with *Open Coding* regarding similarities and differences. A more advanced code system is obtained by building different sub and major categories than in the first stage. In the third cycle, the *Selective Coding*, the researcher tries to reach specific themes and models by reviewing the data and codes for the last time.⁶ With the coding process carried out in these three stages, the obtained code matrices are refined, and the research subject's major lines are determined. This thesis applied

⁵ Juliet Corbin and Anselm Strauss, *Basics of Qualitative Research: Techniques and Procedures for Developing Grounded Theory* (SAGE Publications, 2014), 29.

⁶ Christina Silver and Ann Lewins, *Using Software in Qualitative Research: A Step-by-Step Guide* (1 Oliver's Yard, 55 City Road London EC1Y 1SP: SAGE Publications Ltd, 2014), 84–85.

these triple coding steps to 265 different archive documents using MAXQDA, a computer-assisted qualitative data analysis software program. Another critical stage of this categorization process is the memos explicitly created for each archival source. These memos comprise short and explanatory notes on the examples. The cross-reading of the memos obtained after the entire coding process constituted another critical point in categorizing the bureaucratic approach. Two different contexts emerged with the refining of the code system and cross-readings among memos. The first is the bureaucratic method and factors used to determine village boundaries. I divided these methods and factors into three subheadings: administrative, geographical, and socio-economic frameworks. The second is the decision-making mechanisms of the bureaucracy. I divided these mechanisms into two as *Geo-Administrative* and *Local-Economic* perspectives. These upper and lower headings show that all archival sources were examined in ways that facilitate the application of the Grounded Theory methodology since it can process them without requiring further categorical expansions. All the statistical tables used in the text are the data obtained from the coding system.

1.2 Archival Sources

The archival records examined within the framework of this thesis are the village border determination reports kept in the catalog of the Bakanlıklararası Tayin Daire Başkanlığı (Interministerial Appointment Department); a catalog that is directly affiliated with the Prime Ministry catalog of the directorate of the Republic Archives. These reports were prepared by the İller İdaresi Genel Müdürlüğü (General Directorate of Provincial Administration) affiliated with the Ministry of Interior. The boundary determination reports, which date back to 1943, are followed up to 1983. Between 1943 and 1960, there were 598 village border determination reports. I reduced the number of reports subjected to qualitative analysis to 265 following a preliminary examination procedure among these reports. I have narrowed the sample because most border determination reports provide little or no information about the causes of boundary disputes and the procedures of bureaucratic decision-making. Despite their exclusion from the research, these reports lack the content necessary to contribute to the qualitative analysis. However, the 265 border determination reports included in the qualitative research process include details about boundary disputes between villages

and present statements that provide insight into the bureaucratic process. The archive records under examination are essentially the same in document format. The Reasoned Decision section contains, respectively, the historical background and reasons for the disagreement, the mutual demands and claims of the İl İdare Kurulları (*Provincial Administrative Boards*), and the explanations of the Karma Kurullar (*Mixed Boards*) sent from the center for establishing the boundary to be drawn. The verbal boundary is drawn over fixed topographic points. In the thesis, I included simple sketches showing the agreed boundaries for visualization. Almost all of these archival sources also contain simple sketches showing the agreed boundary.

In conducting this study, which is based entirely on archival records, I did not consider the archival materials as descriptions of the existing situation. These reports, created by the bureaucracy, remained silent and left meaning gaps at certain points. For example, when describing conflicts between villages, some transcripts provide examples of severely distorted narratives. There are some ways of expressing contentions that contradict the legal spirit of the reasoned decision, such as incomplete expression, incorrect punctuation, or inverted sentences, which make it difficult to discern the true causes of local disagreements. However, in topographic location definitions and administrative matters, the report's form is clear and understandable. The identification of such a situation in the creation process of documents may indicate that bureaucrats are more focused on the geographical boundary than on local economic issues related to the sharing of natural resources. The distorted expressions used while describing the main economic reasons for the conflict may indicate that the importance given to these reasons is less than the administrative-topographic context in the bureaucratic mind that creates reasoned decisions. In this sense, these archival sources are open to "reading against the grain" to grasp the inner meanings of conflicts.

1.3 Literature Review

Since there are so few studies on the boundary disputes between the villages in the Republican era, this study is largely based on archival sources. We can roughly divide the existing literature into two categories. Articles from the bureaucratic staff of the relevant period, especially those written by district governors and deputy governors, fall under the first category. To this category of bureaucratic literature, we can add

another valuable study by members of the judiciary on village commons. Two studies comprise the second category. The first is a study by Osman Gümüşçü that evaluates the concept of the border from the Ottoman Empire to the Republican period.⁷ The second is the study carried out on the district and provincial administration in Turkey between 1955 and 1957 by the Faculty of Political Sciences of Ankara University.⁸ Thirty different researchers worked on the project that included the analysis of the questionnaires answered by the governors and district governors. The ideas of the local bureaucracy on regional problems and administrative functioning constitute the dominant theme of this study. The conclusions in this thesis can be tested with the help of information from the local government about border disputes.

Articles in the first category, which were published in the *Türk İdare Dergisi*, can be seen as texts in which local bureaucratic cadres discussed administrative processes among themselves. These sources are not scientific but instead written from an administrative perspective. Even so, if you can read these texts, which are based on experience rather than research, with a critical eye, you can learn a lot about how border conflicts happen.

The study in the first category, written by Sait Köksal, attributes the origin of border conflicts to economic and administrative factors. He argues that the increase in agricultural prices on a global scale during the Second World War and the significant increase in mechanized agriculture activities in the Anatolian geography after the Second World War increased the local encroachment on pastures and plateaus which exacerbated border conflicts. Aside from the economic basis, some administrative inadequacies also contributed to this process. Several administrative and technical deficiencies that weakened the organizational capacity of the government on the land played a critical role in the emergence of these disputes, such as the cadastral failings in determining ownership, boundaries, and measurements of areas such as pastures,

plateaus, and grasslands, and failing to implement land reform programs.⁹ We can determine the validity of this view by considering the cadastral activity capacity of the republican regime. The cadastral activities carried out until 1984 could record only 52% of the total land of the Turkish Republic. The vast majority of these areas are urban rather than rural.¹⁰ Even in 2006, the rate of villages where cadastral activities were completed was 76%.¹¹ Using Mann's conceptualization, the Republic's "infrastructural power"—which refers to the ability to control and dominate the territory under its rule as a modern nation-state—was significantly weak when the cadastral activities of the Republican regime were considered.¹²

The articles of Reşit Yalın and Fethi Aytaç are important for understanding the bureaucratic process in administrative border disputes. Reşit Yalın claims that the concept of the administrative border is an issue that the "ignorant" peasants cannot comprehend.¹³ He claims that the administrative border drawing is only a necessary procedure to determine the territorial authority and responsibility of local governments. When these claims are considered, the issue that normally does not have any effect on the life of the villagers has turned into a land-sharing issue in their minds. As Yalın notes, "the approach of the peasants to this issue is so terrible that moving the borders one meter forward or backward is a great gain or loss, and even, for this reason, it causes endless bloody events."¹⁴ Fethi Aytaç, while adopting a more

¹⁴ Yalın, 76.

conciliatory attitude towards the peasants, criticizes the bureaucratic functioning more seriously. He complains that the bureaucrats assigned to determine the borders do not perform their duties properly. Officials who do not pay due attention to the demarcation process make superficial decisions without examining the disputed lands on foot. This prevents the resolution of disputes, prolonging the process and bringing more serious problems.¹⁵ After almost thirty years of legal regulations, the determination of the borders of only 15 villages in a district of Sivas province, comprising 119 villages, is a powerful sign that the bureaucracy cannot fulfill its duties on border determination.¹⁶

Another study that belongs to this category of bureaucratic literature was conducted by Ali Arcaç and Tevfik İmsel. This study is basically on the legal nature of common village properties. The authors examine the legal nature of pastures and plateaus since the Ottoman period and deal with the disputes reflected in the law department of the Supreme Court. This study offers a descriptive analysis of the court data, as does the literature mentioned above, rather than a categorical analysis. In contrast to studies in the first category, which do not go beyond explaining the legal procedure in administrative border disputes, this study offers the only evidence that local economic resource sharing is at the heart of such disputes.¹⁷

Considering the inconsistency of the legal frameworks in the demarcation processes, the inadequacy of the bureaucratic staff, the weak technical power of the state apparatus to control the space in cadastral activity, and the approach of the peasantry to the border disputes, it becomes clear how complex the demarcation process was. Although these texts produced by local bureaucratic staff offer detailed and useful approaches to the subject, they are far from producing a scientific framework. The only work that tries to shed light on the border concept in Anatolian geography from a political-geographic perspective belongs to Osman Gümüüşçü. He discusses the concept of the border between villages from the early modern Ottoman Empire to the

¹⁷ Ali Arcaç and Tevfik İmsel, *Mer'a ve Yayla Davaları Köy Orta Malları İdari Sınır Anlaşmazlıkları* (Ankara: Güneş Matbaası, 1970).

Republican period. The determination of the village boundaries, which form the basis of the timar system and therefore the taxation practices, and the disagreements on this subject are mentioned in different sources, and it is stated that the bordering practices of the Republican period do not differ significantly from the early modern practices.¹⁸ Thus, the issue of village borders shows the continuity of state-making practices between the Ottoman Empire and Republican Turkey. Gümüřçü's focus is mainly on the Ottoman period, and its coverage of the Republican period is only descriptive. Focusing specifically on the Republican period, this thesis aims to close the gap in the historiography on the village border disputes.

1.4 Thesis Plan

The first part of this thesis discusses the factors and methods used by the bureaucracy in determining administrative borders. I will examine these methods and factors under three main headings: administrative, geographical, and socio-economic frameworks. The most important factor determining the administrative framework is the legal basis. In this context, the laws referenced in the boundary determination process, especially the Village Law and the Provincial Administration Law, will be examined. As this legal framework describes the method, the concept of security plays a crucial role in administrative decisions. In the sub-title of security, the importance of the control and domination that the state apparatus has tried to establish in the rural areas will be elaborated on. The "geographical framework" is a term that underlines the importance the state has attached to topography while drawing administrative borders. I will examine the geographical framework under two sub-headings. *Topographical suitability* and *the concept of distance* are sub-titles in physical geography; *ehl-i vukuf* and *incompatibility of place names* are sub-titles in human geography. The most important factor determining the physical geography is the suitability of the drawn border to the topography. The bureaucracy paid maximum attention to this when determining the boundary. However, the fundamental problem at this point is the practices developed by state officials as a solution when natural elevations and distinctive landforms cannot be found in the topography. In addition, another

¹⁸ Gümüřçü, 'Siyasi Coğrafya Açısından Sınırlar ve Tarihi Süreç İçinde Türkiye'de Sınır Kavramı', 96–97.

geographical method frequently used by bureaucracy is distance. It is an important factor affecting the decision-making processes that the piece of land in dispute is closer to which village. Human geography is determined by the mechanism of *ehl-i vukuf* and the incompatibility of place names. The limits of bureaucratic information over the local geography were expanded by applying to the local knowledge of the people chosen as *ehl-i vukuf*. Another factor is the importance given to the harmony of local place names by the bureaucracy. If the parties to the conflict cannot agree on certain and fixed points on the land, this situation may threaten the sustainability of the determined borderline. The socio-economic framework will be the last subtitle of the first chapter. *The Time Immemorial* statement, *population-land distribution balance*, and *the concept of agricultural security* will be examined as three basic components of the socio-economic framework. In this section, we'll talk about how the villagers and the bureaucracy used the idea of "Time Immemorial," how the balance between population and land distribution affected how the bureaucracy made decisions, and when the idea of "agricultural security" came up.

The second part of this thesis focuses on the conceptualization, analysis, and explication of the context of the emergence of bureaucratic decision-making processes through case studies. The bureaucratic mindset basically follows two different methods. I will categorize the first as geo-administrative and the second as a local-economic framework. In the Geo-Administrative Framework, unique examples will explain how the bureaucratic mind disregards the economic demands that are coming from the locality. Local economic demands can be satisfied at the expense of administrative and geographical concerns in the local economic framework. I demonstrated that economic demands originating from the locals could sometimes be satisfied. This thesis will attempt to describe how and in what situations these two basic frameworks are applied to decision-making processes, focusing on a few examples in order to provide further details. With these two very different frames of reference, the thesis wants to show how hard it is to set boundaries at the village level.

CHAPTER 2

METHODS AND FACTORS USED IN DETERMINING VILLAGE BOUNDARY

2.1 Introduction

This chapter will analyze different factors and methods used in determining village boundaries. As a matter of fact, our primary focus will be on the agenda of central and local bureaucracy and the legal framework of the central government due to the way the archive documents were constructed. We will basically use three main categories to analyze the perspective used in demarcation. The first is about administrative, the second is about geographical, and the third is related to the socio-economic sphere. These three basic categories summarize the attitude of republican statecraft on this issue.

The legal framework is crucial in the administrative sphere because it forms the administrative basis of demarcation. It sets out rules on how and in what form the state will be organized on land. Two fundamental laws have determined the general procedure. Provincial Administration Laws Nos. 4025 and 5442 have addressed legal procedures and administrative hierarchy to resolve border disputes between administrative units of different scales. In addition to Provincial Administration Laws, Village Affairs Act No.442 was the first legal framework that properly tried to institutionalize the border concept in the lowest administrative unit. Apart from these primary acts, certain articles of Law No. 4081 on the Protection of Farmers' Goods, Law No. 5618 on Land Distribution, Law No. 2644 on Land Registry, and finally, Law No. 2613 on Cadastre and Land Registry were also referenced by decision-makers in their reasoned decision texts. Additionally, the administrative practice of bureaucracy has not neglected security issues. Security-focused statecraft was a key part of the process of drawing the lines and coming to a final decision.

The second category of methods and factors used in demarcation is a geographical approach. Authorized councils have strictly emphasized topographic and cartographic acceptability. It is very apprehensible as the only way, theoretically, to prevent further conflicts is to determine meaningful and reasonable borders for all parties to the dispute. Bureaucracy, on the other hand, was willing to create subsistent divisions and sub-divisions alongside the land it politically controls. So, due to these concerns, suitability for the landscape was a central geographical framework in demarcation. Considering the distance between the two villages and the disputed area was another factor taken into consideration by the councils. Keeping the disputed land within the border of the nearby village is a consensus formula that the provincial administrative boards deem appropriate. Another geographical factor was the accurate identification of place names claimed by disputed parties. It is also very understandable as the claimant's assertion that the same area with different names may lead to inconsistent and unreasonable border drawing. At that point, the concept of *ehl-i vukuf* came to the aid of the authorized councils that were continuously in need of local knowledge to grasp all the details of conflicts on the actual topography. *Ehl-i vukuf* can be described as a neutral power whose local topographic information leads to an accurate decision for an official delegation on the field.

The socio-economic framework is the third and last analytical category used in the demarcation process. Final decisions on border disputes do not always ignore disputed villagers' social and economic realities. It was a matter of fact, not only valid for the peasantry but also for the well-being of the national economy, which was based on agrarian output on a large scale. The distribution of natural resources between two or more villages was generally based on the idea of commoning. In other words, authorized councils were sensitive at the point of opening a vital natural resource to common usage. The concept of *time immemorial* was repeatedly elaborated to build a historical basis for sharing resources fairly. One of the socio-economic criteria used in determining which village border the disputed land will be on is the animal and human population of the village; that is, the demographic realities of the disputed parts. The concept of agricultural safety is another crucial socio-economic framework. Bureaucracy has pointed out the importance of agricultural output in an economical manner. Protracted disputes over the landscape typically have the potential to decrease

productivity in agricultural production. So, the demarcation process had to include the concept of agricultural security.

2.2 Administrative Framework

As pointed out above, the backbone of the administrative perspective is the legal framework. This study dealt with 267 village border disputes from 1943 to 1960; all archive documents were produced based on the Provincial Administration Laws numbered 4025 and 5442.¹⁹ According to these laws, changing the borders of provinces, districts, villages, or towns is done with the decision of the Ministry of Internal Affairs and the approval of the President, after the opinions of the administrative committee and general assemblies of the relevant provinces are received.²⁰ Provincial Administration law is a crucial starting point for grasping the *raison d'être* and internal logic of archival sources used in this thesis.

The Village Affairs Act No.442 was also fundamental as it was the first attempt to regulate border arrangements among villages. For applicability in every corner of a new republic, its language is evident and understandable.²¹ Articles No. 1 and No. 2 have basically defined what the village is. According to this definition, a village is a settlement with a population of fewer than two thousand. People who have common goods such as mosques, schools, pastures, and coppices and live in collective or scattered houses form a village with vineyards, gardens, and fields. From Article No.3 to No.7, every step of the demarcation process was explained in detail. The demarcation process was as follows; as soon as this law came into force, each village's border was written on paper by the council of elders. Borderlines that cannot be reconciled with the neighboring village are indicated. The borderline records approved by the administrative councils are recorded in the land registry, and a copy is given to the village council of elders. For the borders that cannot be agreed upon between the

¹⁹ Law No. 4025, published in the Resmi Gazete on 15.05.1941, is the amended version of the Provincial Administration Law No. 1426 that issued in the Resmi Gazete on 05.05.1929. Law No.5442 that is still in effect was also issued in Resmi Gazete on 18.06.1949. Since the archive sources cover the years between 1943-1960, the main legal reference point of this study is the laws numbered 4025 and 5442.

²⁰ 'Provincial Administration Law', 4025 § (1941), sec. 1.

²¹ TBMM Zabıt Ceridesi 2. Dönem 6. Cilt 110. Birleşim (24.2.1340) : 301, retrieved from <https://www5.tbmm.gov.tr/tutanaklar/TUTANAK/TBMM/d02/c006/tbmm02006110.pdf>

two villages, the administrative council conducts an investigation and determines the border according to the fifth article and sends a certified copy to both villages. In the works related to the village borders, this final decision has official validity in state offices and courts.²²

Articles No. 4, 5, and 6 were the most frequently referenced parts of the law by İdare Heyetleri (*Boards of Directors*) in conflicts.²³ Article 4 defines methods and factors used in drawing borders with seven sub-sections²⁴ The third and the fifth sub-sections were especially directive for boards of directors. In almost every case, provincial administrative boards have tried to fix boundaries according to geographically specific points on the landscape (3rd sub-section of article No.4). On the other hand, every reasoned decision document includes the phrase "the rights of the parties within the borders of each other are reserved" (5th sub-section of article No.4)

The fifth article is about how the demarcation process will work in case of disagreement.²⁵ The critical point here is granting the village assembly the right to

²² Village Affairs Act, art. 3.

²³ The term "*Boards of Directors*" were also referred to as "*Central Committees*" or "*Authorized Boards*" in different archive documents. For this reason, it will be used hereafter as it is expressed in each archive document.

²⁴ The first paragraph envisages that all fields, vineyards, gardens, meadows, olive groves, acorns, coppices, and commoners, which have been counted as a village for a long time, remain within the border. The second paragraph warns that in mountainous and forested areas, the scattered houses, fields, and pastures are connected to the nearest village piece by piece, but these should be excluded from the border, but the name of each should be written under the border paper. The third and the most referenced one dictates that As far as possible, the boundary should cross streams, hills, roads, or other unchanging marked places, and these places must be recorded in the local dialect. The fourth carries out that if it is not possible to cross the border of a village through streams, hills, roads, or other unchanging marked places, then the border should be made as straight as possible. Large stones should be erected to mark the border. The fifth dictates that the scattered fields, vineyards, orchards of some people from a village should be shown on the border of the other village, not on the border of the village where the owner is located. The sixth stimulates that the border of one village does not necessarily have to merge with the border of the other village. Suppose there are vacant lands, mountains, forests and plateaus between the borders of the two villages, which have not been considered the property of any village in the past. In that case, they should be left outside the border.

²⁵ In order to draw the borders between disputed villages, two village councils of elders gather together and work to settle the matter among themselves. If they cannot come to an agreement, the board of directors conducts an investigation and draws the border directly within six months and this becomes final decision. It cannot be changed for five years. The council of elders may apply after five years to enlarge or reduce the border upon the need to arise. If the enlargement or reduction of this border does not harm another village, the border is drawn by the decision of the provincial or district administrative councils...

apply the re-bordering process to enlarge the village border in case of substantial problems within a demarcated area. However, there are two essential prerequisites. The first is that five years must have passed since the previously drawn border line. The second is that the requested new borderline must not harm the living space of another village.²⁶

The sixth article articulates the distribution of shared resources.²⁷ It is undeniable that this article was designed to promote the equal use of natural resources, even if the concept of property was referenced. The expression of being the property of a village was not used in exclusive practice. It is elaborated in an inclusive method for the common good of the peasantry. This part of the Act has emphasized that the bordering process cannot be used in a way that cuts off the customary rights of the peasantry to the use of natural resources. Regarding the article, one can assume that the Act bears a resemblance to moral economy principles.

It is very illustrative to see the practical reflections of the Act through sample border dispute documents. For instance, Çatak village of Çankırı province and Muratlı, Okluk, Balcı, and Gözlük villages of Kastamonu province had a disagreement in 1956 since Çatak village was connected to Çankırı during the border drawing. This administrative division led to a dispute on sharing the plateau, pasture, forest, and coppice they used to share without a problem. The committee sent by the Ministry of Interior investigated disputed areas and stated that the region is very scattered and covered with forests. In their reasoned decision, the committee called for the 3rd paragraph of the 4th article by stating that the previously determined border, the Çatak river, cannot be evaluated as a natural borderline as the houses and agricultural lands of the villages in question are spreading on both sides of this stream. It is obligatory to

²⁶For a brief discussion on the legal loopholes created by Article 5, see. Ertuğrul Süer, 'Köy Kanununun Pürüzleri', *Türk İdare Dergisi, İçişleri Bakanlığı, Strateji Geliştirme Başkanlığı* 21, No. 203 (1950): 31–37.

²⁷ If the common areas such as water, water, spring and coppices, which are common between several villages, are within the borders of a village, they are the property of that village, but other villages also benefit from it as before. If such common places are not within the borders of a village, they are the joint property of the villages benefiting from them, and these rights are written on the border papers of each village, and they protect them and make use of them as before.

pass through the points of the borderline that can separate the disputed village lands from each other as much as possible according to the provisions of the village law.²⁸

Another dispute was between the Meskan-i Herdif village of Bingöl and the Civarik village of Tunceli in 1960.²⁹ The border drawn earlier by the authorized boards in 1955 was deemed invalid by state councils (*Devlet Şurası*) because the boards did not make the necessary investigations, and a new delegation was sent from the center. According to the audit and reasoned decision written by the new board, if the old decree was applied, the roads between Meskan-i Herdif village and its hamlet were cut. In addition, the ancient plateaus, fields, and irrigation areas of this village remained within the borders of Tunceli. The situation constituted a clear violation of the 4th article of the Village Affairs Act. Moreover, this border was also not a natural border line. The latter council demolished the former council's decision concerning the 4th article of the Act in favor of Meskan-i Herdif village.³⁰

It is apt to state another example when the case happened in 1946 between the Göçeri village of Konya and Yukarı Dinek village of Isparta. The dispute was on a 350-decare plot of land on the border of Göçeri village. The Provincial Administrative Board of Konya established its argument on a decree dated back to 1234, and a court decision was taken against Yukarı Dinek village in the case of prohibition of intervention in 1950. On the other hand, the Board of Isparta states that this edict cannot be read in its entirety and will not have legal value since it belongs to a time before the publication of the Village Act. Additionally, by claiming that the borderline proposed by the Board of Konya is not suitable for topography, Isparta gave specific reference to the 3rd paragraph of the 4th article of the Act. Besides, the Board of Isparta wanted to include the land in question within its borders by referring to the fact that the borders can be

²⁸ Başbakanlık Cumhuriyet Arşivi, Bakanlıklar Arası Tayin Daire Başkanlığı [30.11.1/258.27.3], 30.05.1956. In archive references, hereafter, the Başbakanlık Cumhuriyet Arşivi will be abbreviated as BCA and Bakanlıklar Arası Tayin Daire Başkanlığı will be abbreviated as BATDB.

²⁹ The names of the mentioned villages have been changed. As stated in the document, the new name of Meskan-i Herdif village was Çalیکاğıl and the name of Civerik village was Sarıyayla. For the study that deals with the change of village names as a result of the population engineering policy of the republic, see. Kerem Öktem, 'The Nation's Imprint: Demographic Engineering and the Change of Toponyms in Republican Turkey', *European Journal of Turkish Studies. Social Sciences on Contemporary Turkey*, No. 7 (23 September 2008), <https://doi.org/10.4000/ejts.2243>.

³⁰ BCA BATDB [30.11.1/283.20.14] , 24.11.1960

enlarged or reduced depending on local needs according to the Act. (2nd paragraph of the 5th article). Upon the investigation, the board of directors stated that there is no legal obstacle for some lands to remain within the borders of each other (5th paragraph of 4th article) and that there is no need to change the *de facto* border that has been used for forty years.³¹ As it can be seen, the argument that the provincial administrative board has built on the Village Act can be refuted by the board of directors by referring to the different articles of the same Act in consideration of the regional conditions. The same situation can be seen in another example.

In 1953, a disagreement arose over the place called Karadayı locality, between the Düger village of Kayseri and the Kalaba village of Kırşehir. The incident was evaluated as a border dispute by the Central Committee. The Kayseri administrative board reported that they have a border document issued in accordance with the Village Act and also registered in the land registry, but the village of Kalaba could not submit such a document. Besides, the Board of Kayseri asserted that the Kalaba villagers' possessions in the disputed area are not a sufficient reason to change the border. (5th paragraph of the 4th article) The administrative board of Kırşehir, on the other hand, only requested a border that corresponded to their former property and possession rights. The board of Kırşehir did not use any legal arguments other than this request. Upon investigating the landscape, the board of directors decided to draw a new borderline in favor of the Kalaba village. In the reasoned decision, the committee highlighted the complexity of property relations in the Karadayı locality and also that most of the land in the area in question is in the hands of the villagers of Kalaba. It is clearly seen that the central committee evaluated the case concerning the 1st paragraph of the 5th article while the board of Kayseri was appealing the 5th paragraph of the same article.³²

Giving reference to the violation of the Village Act was a general attitude among provincial administrative boards for getting approval from the boards of directors. For legal compliance, both villages must approve borders for legal validity. In a land dispute between Bozhüyük village of Sivas and Armutalan, Söğüttere villages of

³¹ BCA BATDB [30.11.1/187.36.10] , 14.10.1946

³² BCA BATDB [30.11.1/236.5.16], 24.02.1953.

Maraş in 1948, the claim of the Maraş Administrative Board was based on a previously drawn border record and a court order based on it. In response to the claim of the Maraş, the Board of Sivas established its claim on the invalidity of previous border records drawn without the approval of both sides by using the phrase "*violation of the spirit of the law.*" In addition, concerning the 5th article, the board of Sivas argued that if the border is not re-arranged, the Bozüyük villager's living space will shrink because of their arable land and a significant amount of meadows are within the border of the opposite side. Consequently, the boards of directors decided on a line against the border registration and court order that the province of Maraş had unlawfully obtained, showing that it accepted the argument of the provincial board of Sivas owing to the difficult economic conditions of Bozüyük villagers'.³³

As we mentioned above, the 6th article of the Act was designed to sustain an equal distribution of limited natural resources. To illustrate, during the demarcation process between Burdur's Yeşilova and Denizli's Bademli village in 1945, the central committee stipulated that the animals of Bademli village would benefit from water even though it leaves the waterhole within the borders of Yeşilova village.³⁴

There are differing opinions on how adequate the Village Affairs Act is in settling border disputes. For example, Çetin claims that the border disputes that caused fights and unrest between villages for centuries were resolved as a result of the Act; to strengthen this argument, she depended on the fact that the borders of 14,988 villages were drawn based on the Act in 1933.³⁵ The number of villages in the republican regime in 1935 was 34,876³⁶. When we compare the total number of villages with the number of villages whose borders are drawn, this corresponds to a serious ratio at first glance. On the other hand, Tortop, in his article written in 1967 on the reorganization of administration in the villages, gives exact figures on the situation at the village

³³ BCA BATDB [30.11.1/197.8.20], 17.03.1948.

borders to highlight the deficiencies in the enforcement of the Act. The borders of 32594 villages out of 34813 were determined. The border of 1314 villages has not been drawn yet, and 905 villages have not been drawn since they are in dispute. Thus, the number of villages whose borders could not be determined is 2219.³⁷ However, it is critical to keep in mind that drawing the borderline does not necessarily mean settling the disputes. As illustrated in the examples above, after the borders were determined, each village was able to request a new border to be drawn with different claims by citing the second paragraph of Article 5th of the Act.³⁸

After the legal regulations that are taken as the basis in the disputes, we can move on to the references to other legal regulations. One of them is Law No.4081 on the Protection of Farmers' Properties. This law aimed to protect agricultural products, which are the vital and economic support of the peasant household, from possible threats. It would be essential to look at how provincial administrative boards and central committees use the law. The disagreement between the Yahşiler village of Denizli and the Eymir village of Aydın arose from the desire to expand the previously drawn borders of the village of Yahşiler to the contrary of the village of Eymir. According to the claim of Aydın province, the reason for their desire to expand is that they want to benefit from the oak trees, which are the property of their village based on title deeds. If this request is accepted, the border will pass very close to their village houses, and there will be no access to the pasture. Since the road they will use to reach the pasture will be within the other village land, they will have to violate law No. 4081. In the face of this claim, the central bureaucracy accepted the claim of Eymir village and determined the border, taking into account the further consequences of the violation of the law.³⁹ It is illustrative that the central board did not remain indifferent to the reference to this law by the local administrative board.

³⁷ Nuri Tortop, 'İdarenin Yeniden Düzenlenmesi Açısından Belediyeler ve Özel İdareler', *Türk İdare Dergisi*, İçişleri Bakanlığı, Strateji Geliştirme Başkanlığı 38, No. 307 (1967): 146.

³⁸ For a study that tries to determine the problems caused by the re-drawing request made on the basis of the 5th article of the Law, see Süer, 'Köy Kanununun Pürüzleri', 31–37. Süer claims that the absence of any regulations or instructions regarding such an important law can be seen as a reason for the frequent use of the 5th article.

³⁹ BCA BATDB [30.11.1/241.33.19], 11.11.1953.

It was also crucial for decision-makers to settle the dispute by referencing this law in cases where there was intricate terrain, and decision-making was not easy. The disagreement between the Uluğaç and Yeniköy villages of Niğde in 1955 is a clear example of this situation. With the border drawn in 1949, some fields on the Uluğaç side were given to Yeniköy, and the pastures between the fields were opened to the everyday use of the two villages. In the examination, it was determined that the pasture areas in the region were turned into agricultural land over time. The Provincial Administrative Board rejected the request for a new border drawing since it is not possible for Uluğaç villagers to bring their animals into the area turned into agricultural land of Yeniköy villagers, according to Law No. 4081. The law was used to protect the existing situation in complex terrain.⁴⁰

In another dispute that happened in the same year between the Pınarbaşı and Gökçalı villages of Çanakkale, the law No.4081 was evaluated as a safety valve. The dispute arose from the possession of the land around the Derviş Pasha farm. The two village borders were not adjacent, and other villages were in between. Gökçalı village descended to the Menderes Stream to water their animals by obtaining permission from the villages in between because they rented a part of the Derviş Pasha farmland and bought a part of the Pınarbaşı village. In this case, the Gökçalı villagers wanted their borders to be extended to the Menderes Stream. However, the same was not true for Pınarbaşı villagers because they also rented land across the stream. Due to the land they had previously sold to the Gökçalı villagers, the use and property rights on the land had become complicated. In this case, the Provincial Administrative Board could not determine a border that would protect the rights of both parties equally. The only way out of this complex situation was to open the Menderes Stream for the use of both villages and to state that the provisions of Law No. 4081 would work if any damage occurred on the lands of either side.⁴¹

Another dispute that referred to this law arose in 1956 between the Mesudiye and Ballıkaya villages of Bursa. Mesudiye villagers bought a meadow in 1945 for 22,000 liras. This meadow is also an area that Ballıkaya villagers use during the summer

⁴⁰ BCA BATDB [30.11.1/250.10.18], 25.03.1955.

⁴¹ BCA BATDB [30.11.1/250.08.04], 25.02.1955.

months by renting it. When the land changed hands, they were deprived of this right. According to law number 4081, they were punished for using the land of another village. The central committee stated that grazing on the land that is the property of Mesudiye village is subject to punishment, and the law cannot be violated, and banned Ballıkaya village from this land and approved the border in favor of Mesudiye village.⁴²

What the last three examples have in common is the complexity of ownership and usufruct rights on the disputed lands. The only legal basis of the bureaucracy in solving this complexity is the provisions of the law numbered 4081. Considering all this, we can claim that this law had profound importance within the administrative framework of the demarcation process.

In addition to the disputes that arose from complex ownership and usufruct rights, they have also resorted to different legal frameworks in some disputes involving pasture and forest areas. In pasture disputes, the central government used Law No. 5618. In forest disputes, it used the Forest Law, Land Registry Law No. 2664, and Cadastre Law No. 2613.

Law No. 5618 is a law that brings additional articles to Law No. 4753, Getting Farmer to be Landowner. The third additional article of this law covers the details of how the land-sharing will be carried out in pasture disputes.⁴³ The main point here is that in some border disputes arising from pasture sharing, the central bureaucracy does not evaluate the problem as a reason for border disputes and legitimizes the situation by referring to this law. Thus, when a suitable border could not be drawn for the local resource problem, the central committee transferred the issue to the other competent authority (Ministry of Agriculture) and chose to draw an administrative border. This

⁴² BCA BATDB [30.11.1/261.44.16], 12.10.1956.

⁴³ In the regions where this law is applied, the needs of pasture are calculated according to the norms prepared by the Ministry of Agriculture and accepted by the Council of Ministers by taking into account the agricultural and economic conditions of the villages, towns and cities, animal assets and future developments in this direction, after the cultural lands such as fields, vineyards and gardens are separated, . These places are limited and documented with a report by issuing sketches and maps according to the specified needs.

situation can be seen as a *method* the authorized boards use when deciding on complex natural resource-sharing disputes.

For example, the border dispute in 1959 between Berhal in Artvin and Dutha in Rize arose from the right to use the pasture between the two villages. The villagers of Berhal could not find a place to graze their animals because the pasture they had been using for a long time was within the border of Dutha village. Dutha villagers stated that they used to give Berhal villagers the right to use this pasture for two months for a certain fee, but this was no longer possible with the increasing animal population. Although the Central Commission accepted that the Berhal villagers would be in a difficult situation, it affirmed the existing border by declaring that this situation could not be seen as a border dispute and should be resolved according to Law No. 5618.⁴⁴ A similar conflict arose in 1958 between twelve different villages in Ankara and nine different villages in Bolu. In 1953, provincial administrative boards wanted to determine a border that would resolve the pasture dispute. However, the central committee stated that the issue in question was the provincial border, and such a border could not be drawn according to pasture sharing, and this should be done according to law No. 5618.⁴⁵

The last disagreement that exemplifies the approach of the central committees is between the villages of Eğneş and Kocapınar in Burdur. If the border determined in 1933 is changed, the cultivated lands of Eğneş village will remain within Kocapınar. This was not considered a possible solution. The remaining controversial area is the pasture. The commission sent from the center stated that it is not within its authority to draw borders concerning pastures and pointed to law No. 5618 and the boards responsible for it and did not change the border.⁴⁶

As we have seen in the examples above, when border demarcation failed to solve the resource-sharing problems on the land, administrative boundaries were drawn by providing legitimacy on different legal grounds. The same situation was true when

⁴⁴ BCA BATDB [30.11.1/276.15.02], 12.05.1959.

⁴⁵ BCA BATDB [30.11.1/269.13.15], 03.05.1958.

⁴⁶ BCA BATDB [30.11.1/261.43.15], 12.10.1956.

conflicts arose over forests. In these cases, the central committees justified their decisions again by referencing different legal frameworks. We can assume that the exclusionary decision-making attitude is the basis of the purpose of legitimation. To evaluate this argument, it will be helpful to look at the following examples.

The border dispute between Yenice and Eđdemir villages of Kütahya in 1955 resulted from the usage right of Ardıç Plateau at the summit of Eđriboz Mountain. Eđdemir village cleared the area for agriculture and banned the Yenice villagers who were dwelling very close to this area. The central committee stated that no village had anything to do with this place because this land was partly covered with forests. For this reason, the area was seen as the property of the state treasury and had to be under the control of the state.⁴⁷ The committee based this claim on Article 16 of the Land Registry Law No. 2644⁴⁸ and Article 25 of the Implementation Regulation of the Cadastre Law No. 2613.⁴⁹ These articles strictly forbade the use of forest land as a pasture or farmland. The example above is also a reflection of this purpose.

Forest law was also used in the same direction, apart from these legal frameworks. In 1956, the conflict between the Esenceli village of Istanbul and the villages of Kervansaray and Bıçkıdere was an example of the use of forest law. The villagers of Kervansaray and Bıçkıdere experienced difficulties because the land they bought from the villagers of Esenceli was still within the borders of Esenceli. Although they claimed that this land should remain within their borders, according to the central committee, this land is subject to the forest law as it also includes the forest area, and these demands could not be considered appropriate, and the demarcation request was

⁴⁷ BCA BATDB [30.11.1/249.07.02], 25.02.1955.

⁴⁸ “Except for those allowed in special laws, fields cannot be opened from and private buildings cannot be built in forests, groves and coppices belonging to the State, municipalities and villages. Even in private forests, the field cannot be opened unless permission is obtained from the ministry to which it belongs.”

⁴⁹ “...For the registration of the places that have been reconstructed from the privately owned land of the state, the conditions are as follows:

1- Confirmation by the administrative board that there is no objection to the assignment of that place.

2- Absence of forests, groves and similar places

3- It is obligatory for the developers to be Turkish citizens...” *Tapu Kadastro Mevzuatı : Kanunlar, Tüzükler* (Ankara: Tapu ve Kadastro Genel Müdürlüğü Yayınları, 1979), 86.

rejected. The disputed area was also excluded from the borders of both villages due to its forest character.⁵⁰

In another example from 1955, the cause of the border dispute was a forested area. However, the distance of this land to the villages, its topographic condition, and the experts' statements showed that the disputed area belonged to the village of Göynükören. However, the central committee decided that since this land had the characteristics of a forest, it was forbidden for both villages to cut wood, collect bushes, bring their animals into the region, and open agricultural land from this area, according to Articles 25⁵¹ and 42⁵² of the Forestry Law. It was reminded that the protection of this region was given to two village councils of elders. So, the demarcation process was carried out without concerning the claims of both villages.

References to Land Registry Law and Forest Law were used to nullify villagers' claims on disputed land. According to the relevant provisions of these laws, the use of forest land was under strict control. The commissions sent from the center were sensitive to such lands and clearly stated this in their reasoned decisions. It would not be wrong to consider different legal frameworks as the legal and legitimate grounds for the exclusionary policies of the central bureaucracy in rural areas. At the same time, it should be added that in regions with problems in resource sharing, an approach that only deals with the issue from an administrative point of view give us clues about how the state apparatus sees the concept of border. Such an administrative framework has illustrated itself not only in natural resource distribution but also in the perception of security in a locality.

⁵⁰ BCA BATDB [30.11.1/259.28.18], 30.05.1956.

⁵¹ "It is forbidden to re-settle within the state forests and to construct all kinds of buildings and barns, to make places for the shelter of animals, and to re-open fields, other than those related to the operation and preservation of the forests by the State.

For all kinds of buildings and installations to be made for public health, safety and benefit in forests, and for buildings and installations to be built by those who will process forest revenues.

It is necessary to get permission from the agriculture ministry."

⁵² "With the permission of the General Directorate of Forestry, animals are allowed to be brought and grazed on the pastures in the state forests, according to the plans to be approved by the forest engineers and the chief forest engineers."

The security concern of the bureaucracy in local disputes manifests itself in two primary ways. The first was the concern of the state's internal security organization to dominate the geographical area. Second, it was undesirable to leave land disputes in a way that could lead to more significant confusion in the future. It seemed to be a problem that immense turmoil burdened the internal security organization.

The conflict between Martanis and Alakan villages of Şatak district of Van province and Mezrea village of Beytüşşebap district of Hakkari province occurred in 1943 was a clear example of the first concern: the domination of the geographical landscape through security organizations. Although no details were given about the reason for the disagreement, one statement in the reasoned decision stands out: "A gendarmerie station was built on the edge of Şabur Stream in Şatak district, and the villages in the area were kept under constant surveillance." For this reason, the border was drawn with the concern of ensuring safety and order.⁵³

Another disagreement, which was decided with the same kind of security perception, occurred in 1959 between Berhal village of Artvin and Dutha village of Rize. It has been mentioned above that in this case, and the decision was made under Law No. 5618. In addition to that, the perception of security at the drawn border is also mentioned. It has been stated that if the decision is made according to the topography, it will cause some weaknesses in terms of security. For example, in order for the Yusufeli Gendarmerie to carry out its duties in the disputed plateau region, it is necessary to cross the Altiparmak mountains. It is challenging to realize this because it will be time-consuming and tiring for the gendarmerie to cross this mountain. This situation may cause delays in case of a possible need and prevent taking immediate measures when faced with an undesirable security situation. According to the reasoned decision, the border was tried to be drawn most appropriately in terms of the maneuverability of the gendarmerie.⁵⁴ These two examples illustrate to us that the ability of the gendarmerie to keep the region under control was an essential factor in determining the border.

⁵³ BCA BATDB [30.11.1/160.08.14], 27.04.1943

⁵⁴ BCA BATDB [30.11.1/276.15.02], 12.05.1959.

The dispute between Sivas's Dariseki and Ekrek villages in 1953 was an excellent example of the second dimension of security concerns. In the text of the reasoned decision, the bureaucracy stated that if the disputed land were not given to Dariseki, this village would not be able to survive economically, whereas if the land was given to Darisekiye, it would cause controversy among Ekrek villagers. Therefore, if the specified border was accepted, it was imperative to take robust security measures until calm was established. The bureaucracy's attitude was clearly in favor of security concerns. It was inevitable that the decided borderline would be to the detriment of one of the two villages. In this case, the provincial administration was informed that necessary security measures must be taken until the conflicts that would arise in this situation were to be prevented.⁵⁵

In 1953, the dispute between the Kurukol village of Giresun and the center and Bozad villages of the Suşehri district of Sivas was resolved by accounting for this security concern. If a decision is made as to the two provincial administrative boards' demands, the lands of the villages will be taken from them and given to the other side, and the conflict will continue more fiercely. The only thing to do to end this violent situation was to leave the land under the control of each village within the borders of their village.⁵⁶ As can be seen in the last two examples, it was a way of bureaucracy to set up a situation that would not cause security problems in the future while drawing the border. If the security problem can't be avoided, warning the local government and security forces is another way to deal with it during the demarcation process.

2.3 Geographical Framework

In the first part of this chapter, we tried to analyze the administrative framework of the bordering process. The administrative perspective of state agencies resembled the geographical conditions of local areas. The most important way to establish an effective administrative system is to dominate the geography. The borderlines must be in harmony with the regional topography to achieve this. In addition to the topographical suitability for controlling geography, human geography is also an

⁵⁵ BCA BATDB [30.11.1/239.22.05], 30.07.1953.

⁵⁶ BCA BATDB [30.11.1/237.12.04], 30.04.1953.

essential building block. By human geography, we mean the long-standing relationship of local people with their natural environment. The relationship of the administrative border with the topography was not sufficient on its own. For the functionality of this border to be compatible with the internal relationship established by the local people with the topography. The geographical perspective in the demarcation process includes topography as a material reality and the social relationship that local people establish with their geography. In this part of the thesis, while topographic suitability and the concept of distance are evaluated as the physical aspect of the geographical factor, the inconsistency of local names and the concept of *ehl-i vukuf* (expert witness) is also considered as the human aspect of the geographical factor.

Article 4 of the Village Act indicates that the border between two villages must pass through certain geographical points. This is precisely what we mean by topographic suitability. If there were no such natural points on the land, the boundary line had to be drawn as straight as possible, and the stones had to be shown vertically. Although there were some exceptions in almost all of the cases we examined, topographic suitability emerged as one of the most critical factors in the decision-making process.

In addition, we will try to evaluate the concept of suitability to topography by referring to three different situations with the examples we will examine. The first is the artificial straight line, created when the boundary could not cross a fixed point on the land. Secondly, we will examine how bureaucracy handles it in difficult-to-demarcate areas like lakes and streams. Third, we will see the attitude of the bureaucracy when local demands oppose the concept of topographic suitability.

As we stated above, the artificial straight borderline was a method used when it was not possible to draw a topographically suitable line between villages. Tools were used to mark specific points, such as piles or concrete, to establish a demarcation line without conflict. The dispute between the Bakırca and Uzunhacı villages of Tekirdag, which was concluded in 1953, has not been clarified for a long time with the mutual claims of the two sides. Since there are no suitable topographic points on the land, the parties had to refer to a flour factory in the region as a triangulation station on the land.

The central committee declared that the only way to draw a boundary on this flat and smooth land is to erect a boundary stone in a straight line.⁵⁷

Another aspect of the dispute between Beşk y in Kayseri and Til village in Nevşehir, settled in 1958, can be informative. Pasture, which was left for the common use between the two villages, had been turned into arable land by the inhabitants of the two villages. The border line put forward by the Nevşehir provincial councils was rejected because the people of Beşk y would leave the lands they have the right to use on the opposite side of the border, which would cause serious problems in the future. On the other hand, according to the explanation of the bureaucracy, no geographical recesses and protrusions will create a natural border between the two villages. For this reason, the border between the two villages was determined as a straight line between two fixed points and through the fields. In this situation, where the geographical line is unclear, passing the border line through the fields was not seen as a problem because this was the only solution that bureaucracy could offer.⁵⁸

The most difficult areas to create borders with stakes are regions such as rivers and lakes. Lakes can periodically ebb and flow, complicating claims on arable land in the region. Also, since these movements were difficult to track, the inhabitants of the area might try to create terrain in their favor by playing with the boundary lines previously determined with stakes. The same is true for streams. Stream beds can change over time, and erosion and deposition can change the quality of agricultural land, which can cause border disputes.

The resolution of the conflict between the Susuz village of Konya and the village of Arvana in 1933 was an excellent example of this situation. The land on the shore of Suęla lake is flat and fertile. During the backwater periods, the villagers cultivated this land, causing border disputes.

⁵⁷ BCA BATDB [30.11.1/242.39.12], 22.12.1953.

⁵⁸ BCA BATDB [30.11.1/270.14.02], 03.05.1958.

Figure 1. Satellite View of Susuz and Arvana Villages

The border drawn in 1933 led to conflict again in 1955. The border marked by stakes on the flat land is being disrupted by the villagers' relocation of these stakes to their advantage. In the examination of the central committee, it was stated that the flat structure of the land would cause conflict in the future, and the only way to end the conflict was to show the borderline with concrete piles.⁵⁹

⁵⁹ BCA BATDB [30.11.1/251.16.05], 30.04.1955.

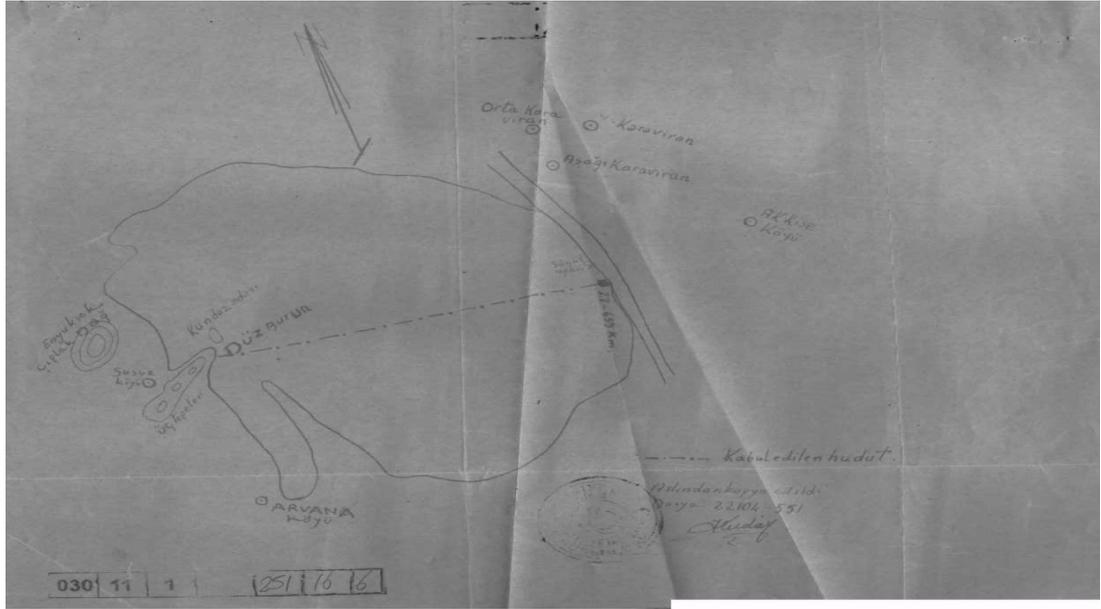

Figure 2. The Sketch of the Boundary Between Susuz and Arvana Villages (taken from BCA BATDB [30.11.1/251.16.05], 30.04.1955. p.6)

This was not the only dispute over Suğla lake. Akkise village, Orta, and Aşağı Karaviran villages in the region also applied to the ministry due to the same disagreement. Although the border was determined with concrete piles in 1935, these piles were destroyed by flooding, and when the water receded, the villagers changed places of these stones against each other, disrupting the border.

Figure 3. Satellite View of Akkise and Orta-Aşağı Karaören Villages

The Central Committee considered that the border should remain the same and that the places of the border stones mentioned in the previous decision should be marked on the sketch by a technical officer, and the stones should be placed accordingly.⁶⁰ Looking at the pictures presented for the two examples, the flatness of the land around the lake can be seen. This situation has led to border disputes with seasonal movements of lake water. For the solution, the method of erecting boundary stones that will show a fixed border on flat land has been applied. Another cause of conflict, as reflected in 1959, is the change of the stream bed. Land disputes exist between two villages in Çorum Province, where the Kızılırmak is determined as the borderline due to river bed displacement in different years. Kızılırmak occasionally left sand and gravel on the right and left shores, causing the defined border to become fluid. It did not seem possible to resolve the dispute geographically because it was impossible to avoid this situation. The villagers applied to the court for a possible solution. The bureaucracy has drawn a boundary with some fixed points since the court dealing with the case must have at least a defined boundary as a basis for its inspection.⁶¹

⁶⁰ BCA BATDB [30.11.1/251.16.06], 30.04.1955.

⁶¹ BCA BATDB [30.11.1/277.21.01], 03.05.1958.

As illustrated in the three different cases above, the natural activities and the efforts of the local people to turn these activities into an advantage for themselves remind us of the fluidity of the borders at these points since the fluidity of the border concept both damages the economic and social balance of the region and prevents the bureaucracy's desire to create fixed and unchanging borders as required by the administrative understanding. Decision-makers cannot be expected to accept the concept of fluid boundaries. Instead, the bureaucracy tried to set boundaries with stone stakes and stabilize the boundary line to some extent.

The last situation we will discuss before moving on to the concept of distance was the attitude of the bureaucracy when evidence-based local claims contradicted the topographic plane. The dispute that occurred between Misakça and Gebeçınar villages of Balıkesir in 1951 can serve as an example of this situation. It has been claimed that most of the lands remained within the borders of Gönen county after the Misakça village, which was previously a part of Gönen county, was taken to the borders of Bandırma county. Gönen village has documented this claim with land registry records. But, even though the title deed supported the prosecution's claim, the central committee refused to accept the border line that Misakca Village wanted. This was because there was a fixed borderline, like Gönen Stream, that could not be moved.⁶² The bureaucracy legitimized its decision by stating that this borderline has an administrative meaning and does not affect the property and usufructuary rights. This basis of legitimacy is, in fact, a clear indication that the process of differentiation has different meanings for bureaucrats and peasants. In almost all the reasoned decisions, the bureaucracy used the expression of the rights of the parties within the borders of each other. According to this statement, the state saw the concept of the border as a kind of space organization and the institutionalization of the state apparatuses on land. On the other hand, local people thought of the border concept as obtaining the right to use natural resources. Köksal expressed this situation in the article on border disputes in *İdare Dergisi* as follows:

29 years since the implementation of the Village Law, 23 after the implementation of the Municipal Law, and 25 years since the implementation of the Provincial Administration and the Provincial Administration Law that changed it, the citizens have not been convinced that the determination of the border is an administrative act,

⁶² BCA BATDB [30.11.1/224.25.08], 23.06.1951.

that an existing right cannot be canceled or a new one cannot be created. Over the years, borders have not been drawn, and conflicts have not been eliminated.⁶³

Another case in which the attitude of the bureaucracy on this issue can be seen very clearly emerged between the villages of Rize and Artvin and came to a solution in 1956. This dispute was over which province the disputed plateaus would stay in. The Artvin provincial board accepted that the borderline suggested by the Board of Rize was fully compatible with the geographical conditions but declared that they had a court order dated 1324 that gave them the right to use the highlands and that if the border were not drawn accordingly, they would be in a challenging situation and the conflict would prolong. In its reasoned decision, the central committee rejected this allegation with the following statements :

It is necessary to pass the border through points that always remain constant, do not change, and never give rise to conflicts. In the disputed area, nature has drawn such a border by itself. As a result, the peaks of the hills there constitute the perfect border, depending on the condition of the land. The decisions of the authorized boards of Rize province have almost adopted this borderline. The decisions of other boards, on the other hand, aim to include certain highlands within their borders and, as a result, demand that the border be passed through points that can change and always give rise to conflicts.⁶⁴

This form of expression provides a perfect example of the bureaucracy's handling of geographical concerns in border drawing. The reference that nature draws the ideal boundary by itself provides a full explanation of it from the perspective of actual geography. Additionally, another interesting point is this: while the villages of Artvin had a court decision dating back to the Ottoman period, the bureaucracy preferred to ignore it for the sake of geographical concerns. It's easy to see why this happened since, as was said in the last sentence, the main goal of the central committee was to stop future fights.

The concept of distance was also another material aspect of the geographical framework. The concept of distance can be thought of as the principle of drawing the border by considering which village center the disputed land is closer to. It is not surprising that this concept is referenced in many of the examples examined in this thesis. It is not surprising that this concept is referenced in many of the examples

⁶³ Köksal, 'Memlekette Sınır İhtilafları', 46.

⁶⁴ BCA BATDB [30.11.1/261.43.18], 12.10.1956.

examined in this thesis. To begin by giving a basic example, the dispute concluded in 1954 between Denizli's Bulgaz village and Afyon's Ağvancık, Kocagöl and Örencik villages can be examined. According to the report of the two provincial administrative boards, the disputed area was on land 7-8 hours away from Bulgaz, half an hour from Ağvancık and 1.5 hours from Kocagöl. The Central Committee evaluated 3 different lines as possible borders. However, the concept of distance was used while stating that one of them could not be a suitable line. This line would include the disputed land within the border of Bulgaz village. The land in question is at a distance of 35-40 km from the village of Bulgaz but a distance of a maximum of 7 km and a minimum of 2 km from the villages of Afyon. This possible borderline would suppress the needs of Afyon villages and might cause a possible conflict in the future. For this reason, this line was found inappropriate by the central committee. In this example, although the importance given to the concept of distance is clearly seen, the difference in the method of describing the distance draws attention. While the provincial administrative boards calculated the distance over time, the central committee calculated it over the metric system, which is a more scientific approach.⁶⁵

Another dispute that was decided with this factor in mind was between Hasikli village in Elazığ and Rostuşağı village in Malatya. The two mentioned villages were located on both sides of the Euphrates river. The island of Rast and Bük in the middle of the river was the basis of the dispute.

⁶⁵ BCA BATDB [30.11.1/243.02.12], 16.01.1954.

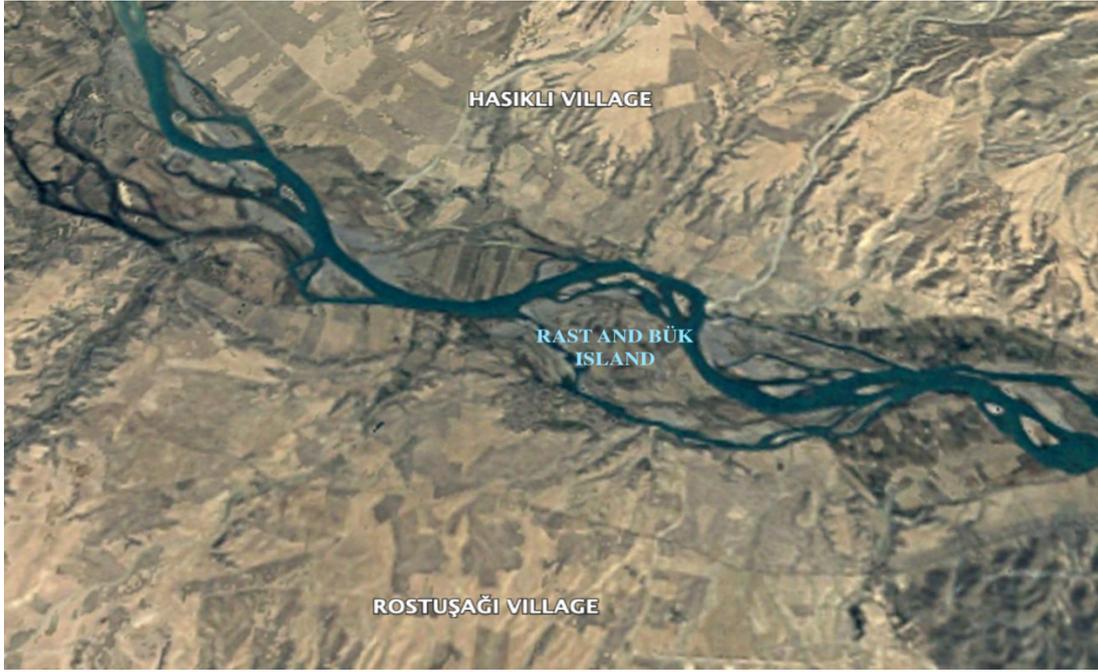

Figure 4. Historical Satellite View of Rast and Bük Island

According to the decision of the qadi court dated 1266(1849/1850), the provincial administrative board of Elazığ claimed that the island belonged to them. The Central Committee has considered this situation while making its decision, but the main reference point in the reasoned decision was the concept of distance, as illustrated in the sketch.

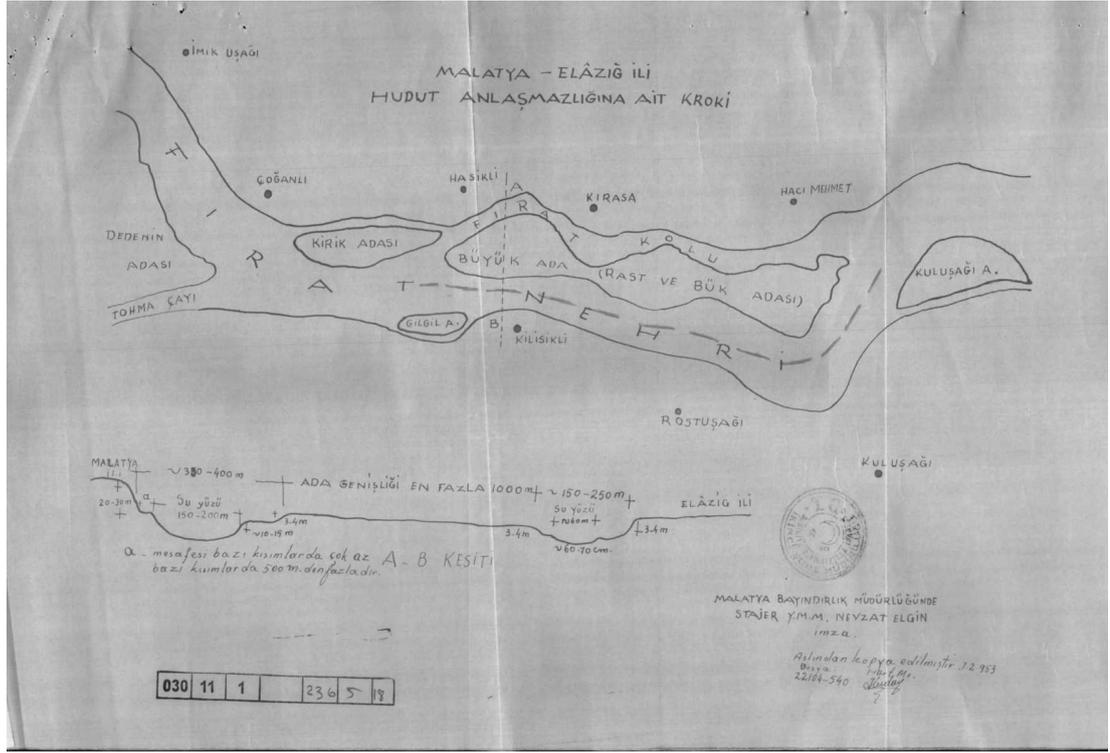

Figure 5. The Sketch of the Boundary Between Hasikli and Rostuşağı Villages (taken from BCA BATDB [30.11.1/236.05.18], 24.02.1953. p.9)

The island in question was 1330-1820 meters away from the Malatya coast, while it was 230-540 meters away from the Elazığ coast. In addition, although the depth of the Euphrates was 1-4 meters in Elazığ, this depth reached 10-15 meters on the side of Malatya. All measurements related to distance and depth were also clearly expressed in the sketch. While Rostuşağı villagers maintained contact with the island by boat, which might create a very dangerous situation when the river level rose, Hasikli villagers could reach the island both as animals and on foot in all seasons. For these reasons, it was deemed appropriate to keep the said island within the provincial borders of Elazığ.⁶⁶

In addition to physical geography, human geography was also an important factor for decision-makers. Suppose we need to explain the term human geography in the context of this thesis. In that case, we are covering the relationship of local people with the topography around them and how the bureaucratic apparatus uses it. The relationship

⁶⁶ BCA BATDB [30.11.1/236.05.18], 24.02.1953.

of the villagers with the topographical structures can be read through the local region names and inconsistencies among them. An ideal boundary definition had to use place names agreed upon by everyone in the area. If the same regions are named differently by the parties to the conflict, the demarcation line drawn will be open to discussion in any way, and conflicts cannot be avoided.

For this reason, an official committee that cannot describe the local topography in terms of the language agreed by the local people and the villagers who cannot agree on naming these topographic structures can seriously disrupt the border determination mechanism. To give an abstract example, if one village calls the area on the land an *A hill* and the other village calls it a *B hill*, the borderline to be drawn concerning this hill will mean the continuation of the disagreements for both sides. Official delegations paid maximum attention to such name inconsistencies while drawing borders. This situation was mentioned in the 1956 report of the Joint Committee, which examined the conflict between Gökçekuyu and Çamlıca villages of Konya province in the region. The names of the places shown as fixed points in the border records previously prepared by both villages were different. For example, two villages showed the Akyol⁶⁷ location as two different roads. The two villages defined the Çadalaz Tomb as different tombs in separate districts. The places they defined as hills were two different elevations. Many elevations in this region could be referred to as hills. Although the names of the barns were mentioned in the border document, many of these barns were lost or in ruins. Procedurally, as the committee noted, it was necessary to draw borders according to the places specified as fixed points in these border records. However, this was not considered possible due to the said conflicts. Under these conditions, officials had to redraw the previously documented boundary line.⁶⁸ The committee had taken great care to prevent this situation, as it was aware of the possible disagreements that the border was drawn without resolving the name and location inconsistencies it would cause in the future.

We mentioned that when there was no agreement among the provincial administrative boards, the delegation sent from the center made a detailed examination of the region

⁶⁷ “White Road” in Turkish

⁶⁸ BCA BATDB [30.11.1/264.09.06], 15.03.1957.

and decided. The most important organ that assisted the central bureaucracy in this review process is the *Ehl-i Vukuf*. *Ehl-i Vukuf* can be defined as third parties whose special or technical knowledge is consulted in any legal dispute and cases requiring proof. It is generally considered equivalent to an expert witness in the Turkish legal system. However, the concept of *Ehl-i Vukuf* and the concept of witnessing are different things. The Witness does not offer any assessment when describing an event as s/he saw it. *Ehl-i viukuf*, on the other hand, makes a special examination and evaluation with the knowledge they have about the situation, without the need to witness the event.⁶⁹

The concept of *Ehl-i vukuf* mentioned in the archive documents we examined did not fully comply with this definition. *Ehl-i vukuf*, in the demarcation process, was a group of people who dwelt in the conflict zone and had the basic knowledge to evaluate the geography and the claims of the parties. They did not have any specialization or technical knowledge on the issue. Because they know the area in dispute, they should be considered a group capable of verifying the claims made by the parties for guiding the bureaucracy. To determine a well-grounded boundary line, it was inevitable to consult the people who lived in the region and had a grasp of the past and present situation of the conflict zones. In this respect, we are talking about a concept that was a mixture of witness and *ehl-i vukuf*, as defined above. We can consider the concept of *ehl-i vukuf* as the main source of the central bureaucracy's knowledge of local geography. Therefore, it constitutes another most important factor of the human geography framework. People who were considered to be *ehl-i vukuf* can generally be considered a verification mechanism of the local claims.

In the dispute between Kastamonu's Yukarıarslanlı village and İmranlar village in 1957, the mixed committee sent from the province examined the area of conflict. Although the delegation tried to agree by bringing together the two village elders and the *ehl-i vukufs*, they were unsuccessful. The delegation took over the management of the meeting and listened to the *ehl-i vukufs* chosen by both villages. *Ehl-i vukufs* were asked one by one about the names of the disputed places in the land, how the border line was used in the past, and how the empty lands in between were used. Considering

⁶⁹ Ali Şafak, 'Ehl-i Vukuf', in *İslam Ansiklopedisi* (Türkiye Diyanet Vakfı), 531–32.

the answers, a sketch showing the mentioned places in the field was created. As seen in the example, the mixed committee provided the detailed local information needed to resolve the issue through the *ehl-i vukufs*. In this sense, it would not be wrong to evaluate the *ehl-i vukuf* as the local hand of the bureaucracy.

Another critical point in this example is that the birth dates of *ehl-i vukufs* were mentioned. The ages of the people consulted when examining the dispute ranged from 47 to 57. In another dispute in Kocaeli province, the experts' ages vary between 53 and 62.⁷⁰ Based on this information, it can be argued that the people chosen as *Ehl-i* were in the middle-aged group. When we consider criteria such as recognizing local geography and the reliability of their statements in terms of mental health, it makes sense why this age group was consulted.

As a result, geographical factors were another important factor that the central bureaucracy relied on for border determination. So that the drawn borders do not cause conflicts again in the future, the elements that we have categorized in terms of both physical and human geography have been taken into account. While topographic suitability and the concept of distance represented the physical geography, the elimination of local name mismatches and the *ehl-i vukuf* institution also constituted the human part of the geographical framework.

2.4 Socio-Economic Framework

Administrative and Geographical frameworks were two different perspectives underlying the demarcation process. Understanding this process will not be possible without a final addition to this. Although the dominant attitude of the bureaucracy in resolving border disputes was to act on administrative and geographical concerns, it should be kept in mind that these border disputes arose from conflicts over regional natural resources. The methods of the bureaucracy, which had to answer such problems, had led to the formation of this last framework.

This section will discuss using the socio-economic framework with three different subheadings. First, we will discuss how the bureaucracy realized the distribution of

⁷⁰ BCA BATDB [30.11.1/264.14.11], 13.04.1957.

natural resources in the local area and the basic emphasis is placed on the concept of "*time immemorial*." Secondly, we will look at how the bureaucracy considered both the animal and human populations of the villages as a factor. Finally, we will examine the issue of *agricultural safety*, which took legal form with the farmer protection law. When all these categories are considered together, it will be revealed that the resolution of border disputes had not only an administrative and geographical but also a social and economic aspect.

It will be necessary to recall the discussion above that the demarcation was an administrative procedure, which did not mean determining local resource allocation. However, nearly all disagreements arose from the desire to include these critical resources within its borders. It was a frequently stated situation in village assemblies, central committees or provincial administrative boards that these natural resources were subject to the use of their villages from *time immemorial*. The decisions of the bureaucratic committees, which examined the disputed regions to draw the final border, were based on the concern not to put disputed villages in a difficult situation while taking these allegations seriously. Although the expression *time immemorial* was used as a special claim by local councils, the central bureaucracy was able to transform the same expression into the legitimacy mechanism of its decisions that encouraged resource sharing. Accordingly, deciding on the common use of critical resources was a widespread phenomenon to end the disputes over the villagers' natural livelihoods.

The method of the central bureaucracy in making the natural resources available for the common use of the parties was of two types. In the first, the disputed parties acted with the aim of reconciliation, while in the second, the bureaucracy came to the same conclusion as a coercive force. According to the reasoned decision of 1955, which dealt with the dispute between Kabaca village of Ankara and Kacık village of Bolu, the water source remained within the border of Kabaca. Kabaca villagers have accepted that the animals of Kacık villagers could benefit from this source when the water is abundant. When the water was scarce, the villagers of Kacık agreed not to let their animals into the other side in order not to cause arguments.⁷¹ The conflict between

⁷¹ BCA BATDB [30.11.1/252.26.13], 26.08.1955.

the villages of Tokat's Artova and Turhal counties in 1948 was also resolved by consensus on the distribution of resources. The places these villages used to have access to, such as pastures, wetlands and coppices in the region, have been open to common use from *time immemorial*, regardless of the borderline.⁷² The last example in which the resource allocation was made by consensus among the villages was between Halkapınarı of Balıkesir and Demirtaş of Manisa in 1949. What makes this example interesting is that the intervention that brought the two villages to reconciliation came from the deputy governor of Balıkesir. The villagers of Halkapınar demanded a new border line, claiming that the area where they watered and grazed their animals was within the borders of Demirtaş. With the consent of the Demirtaş villagers, the central committee suggested that this area be open to common use; thus, the border would not be changed. Still, because the villagers of Halkapınar did not accept this situation, an agreement could not be reached. At this very point, Balıkesir deputy governor Nami Unal met with the villagers of Halkapınar and suggested that they accept the proposal of the central committee. Having accepted this proposal, the Halkapınar council of elders revised their claims. They have accepted the proposed situation to continue the relationship between the two villages based on goodwill from *time immemorial*. Demirtaş villagers, using the same emphasis on goodwill, stated that they accepted the offer exactly.⁷³ Even with the intervention of the deputy governor, the conflict has changed shape. However, the expression of “a long-standing goodwill relationship between the two villages” was remarkable and a perfect example of reconciliation between disputed villagers on natural resource sharing. In the three different examples we have mentioned, it is seen that reconciliation between villages was used as a method for resource sharing, although it was achieved in various ways.

The resource allocation problem encountered in the border drawing could not always be resolved by consensus between the two villages. In these cases, it was possible to observe the coercive power of bureaucracy. This situation can be analyzed through two different disagreements. The border dispute between Azapbaşı and Kürkçü villages of Yozgat in 1955 was over the land used as a pasture in the Akçaalan locality.

⁷² BCA BATDB [30.11.1/250.11.09], 25.03.1955.

⁷³ BCA BATDB [30.11.1/250.08.03], 25.02.1955.

In the reasoned decision, it was stated that this land was a forest area from *time immemorial* and that the main purpose of the two villages was to appropriate this land and open a field for agricultural purposes. In this case, the land was not included in the borders of the two villages and opened to the common use of both sides for grazing their livestock, and it was also aimed to protect the forests in question.⁷⁴

Another similar example was the dispute that occurred in 1956 between six villages of Tokat and five villages of Ordu. The villagers of both sides wanted the land consisting of pastures, wetlands, highlands, and coppices to remain within the boundaries of their village. The common feature of all these villages was that their only source of livelihood was animal husbandry, as they lacked agricultural lands. All these demands posed a serious problem in border drawing. While the central bureaucracy was drawing borders according to the topographical situation, it has openly stated that it would not cause any change in the use of these lands that have been used jointly *from time immemorial*.⁷⁵ In these two examples, it is seen that the disputed parties had always applied the concept of *time immemorial* while claiming that the disputed lands should remain within their borders. However, by referring to the same concept, the provincial administrative boards decided that the disputed regions should not belong to one of the parties but be used as common areas. Although it was provided in two different ways, the bureaucracy has prioritized the common use of natural resources to avoid socio-economic problems in the demarcation process. This situation has been a determining element of the socio-economic framework of the bureaucracy. Both peasants and bureaucrats also elaborated on the expression *time immemorial* as a crucial part of this element.

Although the common use of resources was an important paradigm, the correct establishment of the relationship between the local population and natural resources was another important factor. Bureaucratic cadres knew the importance of striking a balance between natural resources and the local population. For this reason, they tried to keep this balance in the border drawing process. The way the bureaucracy strokes this balance can be seen in three different examples. The first example is between the

⁷⁴ BCA BATDB [30.11.1/258.25.14], 21.04.1956.

⁷⁵ BCA BATDB [30.11.1/263.06.15], 27.02.1957.

villages of Pıtirelli and Pazarköy of Çanakkale. In this dispute, which was settled in 1952, the villagers of Pıtirelli supported some of their claims regarding the population issue. Accordingly, they reported that their village had a population of 557 and 1872 animals.

In contrast, Pazarköy had a population of 199 and 910 animals, and it was unfair for the other village to claim rights in the disputed area. However, as a result of the examination, these figures were expressed differently by the bureaucracy. According to what was stated in the reasoned decision, Pıtirelli village had a population of 441 and 1986 animals, while Pazarköy was 187 and the number of animals they had was 976. As can be seen, there was a slight difference in population data, but this difference was not enough to change the overall picture. It is unclear where the bureaucracy obtained this data in the reasoned decision. However, this data was not obtained unilaterally from the village that made a claim. Based on the population data, the joint committee considered the need for the disputed area and decided to favor the Pıtirelli villagers.⁷⁶ The population was also the determining factor in the pasture dispute settled in 1955 between the Paspala and Sazara villages of Kırklareli. The population of Paspala village is 641, and the total animal population is 4102. The population of Sazara village is 950, and the animal population is 3677. In this example, the bureaucracy noted that the demographic data was derived from the 1950 census. Animal numbers are the results of the animal censuses in 1951 and 1952. Unlike the example of Çanakkale, the number of animals was divided into two cattle and sheep. While this example is more information regarding the source and detail of the population data, the decision makers' approach to the issue was the same.

By emphasizing the Paspala village's need for pasture, the pasture of the opposite village was opened to the use of Paspala villagers.⁷⁷ In addition to making decisions by considering demographic data, the land and pastures owned by the villagers could also be another factor guiding the bureaucracy. These factors were also considered in the boundary drawing process in 1955 between the Bozköy and Horozgedigi villages of İzmir. According to the information in the reasoned decision, while Bozköy had

⁷⁶ BCA BATDB [30.11.1/231.15.20], 07.07.1952.

⁷⁷ BCA BATDB [30.11.1/250.12.01], 26.03.1955.

9000 decares of arable land, 406 inhabitants, 87 households and 2500 decares of pasture, Horozgedigi village had 2000 decares of arable land, 160 inhabitants, 32 households and 647 decares of pastures. Decision-makers claimed that when these numbers were carefully examined, it could be seen how precisely the borderline should be drawn. These numbers, which were very close to each other in proportion, constituted the most important factor affecting the bureaucracy regarding sensitivity and attention. The border was drawn with this situation in mind.⁷⁸ As seen in these examples, population, number of animals, arable land and pastures were among the data taken into account in the border determination process. From these data, the decision-makers could have an idea about the needs of the villages. Most importantly, they analyzed the socio-economic balance between the two villages and reflected this in their decision-making processes. In the light of these data, the importance of the concept of the population within the socio-economic framework is obvious.

In addition to population and resource distribution, the concept of agricultural safety was one of the factors taken into account in the border drawing process in some examples. The basis of the concept of agricultural security has been tried to be drawn with the law numbered 4081, which we have discussed under the title of the administrative framework above. It is possible to see how the legislature handled this concept when the preamble part, which explains in detail why the law was needed, is taken into account. According to the preamble, the country was more vulnerable to agricultural damage than others since its agricultural lands were large, open fields and scattered. It has emerged from experience that it was impossible to prevent this situation only with the control of the gendarmerie. It was envisaged to protect crops, which were the only source of livelihood for the villagers, by establishing a *Murakaba Meclisleri* (Local Agricultural Safety Councils), which was formed by the villagers, along with veterinarians, agriculturalists, and police officers, operating under the leadership of the largest civil servant of the province. The region's villagers would also meet the financial allocation needed by this structure. Although it was necessary to avoid placing a new burden on the peasants, they had to make a relatively slight financial sacrifice to avoid harm. With these sacrifices, agricultural safety would have

⁷⁸ BCA BATDB [30.11.1/252.23.09], 07.07.1955.

been ensured, and the possible damage to the villagers would have been covered immediately.⁷⁹ During the border drawing process, agricultural safety was used to prevent each other's agricultural products from being damaged if the conflict between the two villages continued. It was stated that the most important condition for ensuring agricultural safety is to draw the border to prevent conflict between villages.

In the reasoned decision of the dispute between the villages of Pıtırelli and Pazarköy, which we discussed in the context of the importance given to demographic concerns, this intention of the bureaucracy is visible. One of the reasons why the disputed land was left within the borders of Pıtırelli village was that the people of Pazarköy were willing to water their animals from the land in question. However, the mixed committee assumed that this would require animals to pass through agricultural land, further exacerbating the longstanding conflict between the two villages regarding agricultural safety.⁸⁰ The border drawing process between the villages of Kahrat and İlkurşun in İzmir in 1953 also explains this attitude of the bureaucracy. Since there was no topographically decisive border line between the two villages, it was not considered possible by the mixed committee to draw a border that would eliminate the conflict. In these circumstances, it was stated that the only solution was the cooperation of the local agricultural safety councils of both villages to try to protect the agricultural products from harm (*mezruatın zarardan vikayelerine çalışılması*).⁸¹ In the first example, since there was a suitable border line, the mixed board accepted this line for the sake of agricultural safety. In the second case, where the appropriate border line could not be found, it determined the border by emphasizing the importance of cooperation among Local Agricultural Safety Councils.

The power of the local committees established to ensure agricultural safety can directly affect the decision-maker's approach to the demarcation. The difference created by the power of these committees can be seen in the demand for redrawing the border between the Turgutlu and Hasanbeyli villages of Manisa in 1954. The valuable

⁷⁹ Çiftçi Mallarının Korunması Hakkında Kanun Layihası ve Ziraat, Dahiliye ve Adliye Encümeni Mazbataları (1/409), Başvekalet Kararlar Dairesi Müdürlüğü (6/2152) 13.05.1940 :1-2

⁸⁰ BCA BATDB [30.11.1/231.15.20], 07.07.1952.

⁸¹ BCA BATDB [30.11.1/251.16.10], 30.04.1955.

agricultural land, most of which belongs to the Turgutlu village, was left within the borders of Hasanbeyli village in 1930. Turgutlu villagers stated that agricultural security could not be ensured. They were in a very difficult situation both in summer and winter since the land they mostly owned was within the border of the opposite village. Although they applied to Hasanbeyli village and conveyed their complaints, they could not get a response to solving the problem. In this case, they filed a complaint about the reallocation of the border, and the mixed board reviewed the situation in the region. How the mixed board describes the disputed land was substantial: The disputed area is fully owned and still cultivated cotton, wheat, barley etc. It consists of partly arable fields and partly vineyards. Due to the sprouting ability of the plants in the soil, it offers a fertile and extremely productive appearance.⁸² As can be seen in the expression, the disputed land was an extremely valuable field in terms of agricultural output. The village within which this valuable land should remain was expressed in the reasoned decision as follows:

It has been understood that due to the weak protection of Hamzabeyli village, the land could not be fully protected as claimed, causing complaints from the landowners during summer and winter. It was deemed appropriate to hand over the arable land to the local safety council of the Turgutlu farmers, which have guard buildings reinforced with telephone connections, are managed by regular and well-organized staff and are functional enough to set an example for other districts in the region in terms of agricultural security.⁸³

The well-equipped infrastructure of the regional agricultural safety board of Turgutlu village provided a valid reason for bureaucracy to determine at which border the land in need of such protection will remain. Although the fact that a large part of the land in question belonged to the village of Turgutlu was one of the criteria mentioned by the bureaucracy, it is seen that the main criterion was the infrastructural power of the local safety board. It can be argued that the main purpose of the bureaucratic attitude that prioritized agricultural safety was the concern for economic development in disputed regions. From this point of view, it was understandable that the concept of agricultural safety came to the fore as another strong factor in border determination.

⁸³ Ibid, pp.4-5.

2.5 Conclusion

In this section, the methods and factors that the administrative boards in charge of determining the borders in the regions of disagreement use were examined in detail. These methods and factors were categorized under three main groups: administrative, geographical, and socio-economic. The most important element that determined the administrative framework was the legislative activities that regulated the provincial and village administrations of the young republic. In addition to this main framework, the bureaucracy also referred to the laws regulating the use of village land and farming activities. The regional response to legislative activities has formed geographical methods and factors. The suitability of the borderline to the topography, the distance of the villages to the disputed regions, the harmony in local toponomy, and the *ehl-i vukuf* mechanism as a local information source were the main elements that made up the geographical framework. The bureaucratic committees, which had to make decisions with administrative and geographical concerns, did not ignore the local socio-economic relations. Deciding on the common use of critical natural resources in the conflict regions, the demographic situation between the regions, and finally, the concept of agricultural safety was among the important factors that formed the socio-economic area. When all these methods and factors are considered together, it can be understood that the border drawing process was multi-layered and complex. In addition, although it was the ideal and abstract form of the border concept envisaged by central legislative activities, it can be asserted that the concept of the border in local practices was far from an idealized one and had to be reconciled with the harsh realities at the local level. During the demarcation process, it became clear that the bureaucratic cadres were trying to figure out how to fit the different local needs into the legal and administrative framework.

CHAPTER 3

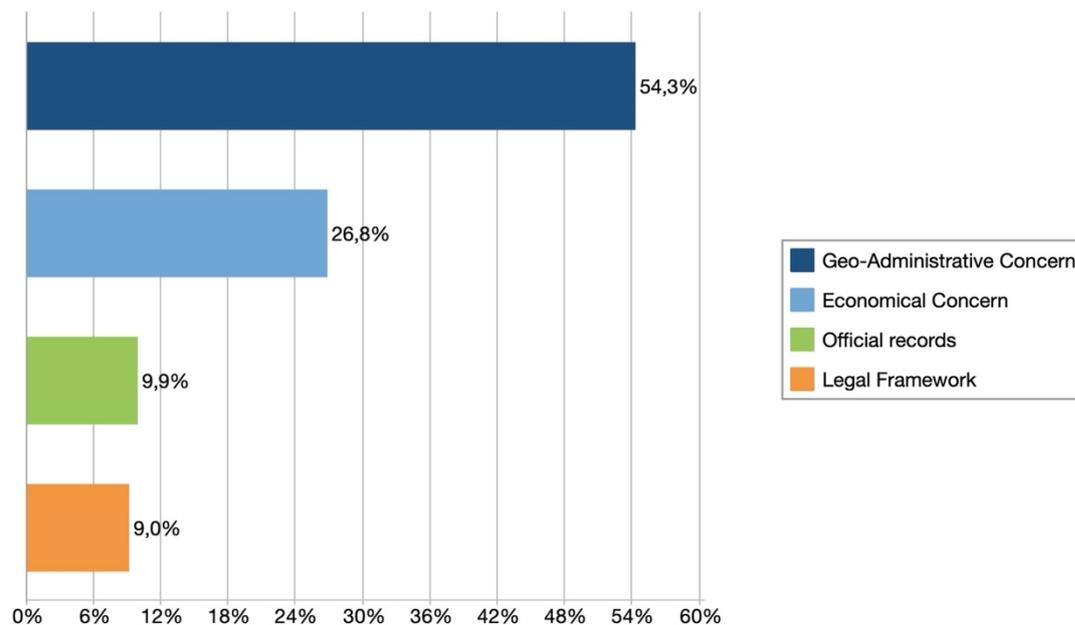

STATE AS AN AGENT OF GEO-ADMINISTRATIVE ORDER *VIS A VIS* AS AN AGENT OF SEEKING LOCAL ECONOMIC BALANCE

3.1 Introduction

One of the main arguments of this thesis is that the concept of administrative border disputes is a problematic approach. The disputes between two or more neighboring villages mainly arose over the sharing of pasture, highland, winter quarters, wetlands and sometimes forest lands. Such natural resources form the basis of the subsistence economy of the villagers. In other words, the availability, adequacy, and ease of access to these resources is the most important factor determining the rural population's socio-economic balance. It is seen that almost all of the 300 border determination reports that were reflected in the archives between 1943-1960 resulted from the problems in sharing such natural resources of great economic value. However, these conflicts were evaluated by the state apparatus in the context of the administrative border dispute and resolved within the framework of the laws regulating this area. From a bureaucratic perspective, although it is obvious that the borders determined as a result of these disagreements are administrative, it can be easily understood from the peasants' perspective that the request is not for determining the administrative border but for fair regulations of resource sharing practice. This section will focus on the decision-making practices of the bureaucratic apparatus. These practices will be evaluated in two sub-categories. The first is *the Geo-Administrative perspective*. The second is *the Local-Economic perspective*. It is necessary to define these two general frameworks separately. The geo-administrative perspective, ignoring the villagers' demand for resource sharing, describes the decisions made according to the topographic structure of the land. Such decisions are purely geographical, thus reminiscent of James C. Scott's concept of the "tunnel vision of the modern state-making," taking into account administrative concerns.

On the other hand, the Local-Economic perspective aims to resolve conflicts through fair resource allocation. In doing so, it is a perspective that can afford to waive the administrative and geographical context. All the archival sources examined easily fit into one of these two categories in terms of bureaucratic decision mechanisms. However, it should be clearly stated that the Geo-Administrative perspective has been referenced much more intensively by the decision-makers in the field than the Local-Economic perspective.

Table 1. References Pointed by Bureaucracy in Demarcation Process Between Villages (created by MAXQDA software)

This situation becomes clearer when we look at the statistical data obtained from the qualitative study conducted on 265 different border detection reports. The reasoned decisions produced by the central committees that examined the regional disputes, the language they used and the references they made were coded separately to yield the data that can be seen on the chart above. The reference given by the bureaucracy to *the legal frameworks* we mentioned in detail in the first section was at the level of 9

percent. It should be noted that to obtain a meaningful data set, references to the Provincial Administration Law, which have to be mentioned in all reasoned decisions due to the legal format of the document, were not coded. The reference to *official records* held by the villagers or obtained by the bureaucracy from different state institutions constitutes 9.9 percent. While the bureaucracy's reference to local economic situations constitutes 26.8 percent, references to *Administrative and Geographical terminology* reach a significant rate of 54.3 percent.

As we said above, this situation can be seen as a result of the government's desire to turn local problems with sharing resources into administrative border disputes.

However, claiming that the border line was determined only for administrative and geographical concerns would be an approach that is far from understanding the issue. Therefore, although the vast majority was geo-administrative practice, this section's main purpose is to share examples of local-economic practice as well. It would be helpful to clarify that each of the conflicts and resolutions narrated in this chapter is only illustrative examples of the many similar approaches encountered in archival research.

3.2 Geo-Administrative Practice of Statecraft

James C. Scott, in his most famous book, in which he deals with the power of planning and implementation representing the modern state, presents a similar framework that we have constructed as geo-administrative practices. The expressions he used while analyzing the relationship between state and nature are as follows:

Certain forms of knowledge and control require a narrowing of vision. The great advantage of such tunnel vision is that it brings into sharp focus certain limited aspects of an otherwise far more complex and unwieldy reality. This very simplification, in turn, makes the phenomenon at the center of the field of vision more legible and hence more susceptible to careful measurement and calculation. Combined with similar observations, an overall, aggregate, synoptic view of a selective reality is achieved, making possible a high degree of schematic knowledge, control, and manipulation.⁸⁴

Tunnel vision, elaborated by Scott, is a kind of bureaucratic tool that simplifies the complex structures at the local level when viewed through the glasses of the state. At

⁸⁴ James C. Scott, *Seeing like a State: How Certain Schemes to Improve the Human Condition Have Failed*, 0 edition (New Haven, London: Yale University Press, 1998), 11.

this point, the administrative structure must reflect the perspective it has developed on issues that are difficult to solve, such as natural resource sharing. It is very difficult for the central state structure to provide instant, detailed, and permanent solutions to local problems in the wide geography it has to manage in the context of the state's infrastructural capacity. The only way to get around this problem is to put all of these problems into one place and look at the subject from this angle.

At this point, the administrative structure must reflect the perspective it has developed on issues that are difficult to solve, such as natural resource sharing. It is very difficult for the central state structure to provide instant, detailed, and permanent solutions to local problems in the wide geography it has to manage in the context of the state's infrastructural capacity. The only way to get around this problem is to put all of these problems into one place and look at the subject from this angle. It should be noted that each of the disputes over important local livelihood elements, which constitute the subject of this thesis, had different backgrounds, contextually, spatially, historically, and even culturally. Considering the nature of the disputes that arose simultaneously by different parties over different resources in different regions, it can be understood how complex and difficult it was to deal with the regional reality. In the early republican period, when the limits of the state's technological tools to manage space, especially the weak cadastral power, are taken into account, it becomes easy to understand the difficulties experienced in examining such complex and numerous disputes. As Scott points out, the simplification method was an inevitable way for the Republican state structure to make the local problem more legible. A good example of this simplification method is that the all-natural resource-sharing disputes we have examined were taken out of their real context and handled in the context of administrative border disputes. This simplifying bureaucratic mechanism manifested the foundation for geo-administrative practice.

Although there are variations within the examples that can be seen below, most of them result from disagreements in sharing natural resources such as pastures and highlands, which are common areas. The central bureaucratic apparatus, which makes decisions based on geo-administrative practice, had built legitimacy on two different legal bases. The first was that such natural resource sharing is not within their mandate and jurisdiction. The central committees stated that their duties were only limited to

determining administrative boundaries and that a solution should be sought through the courts for the right to use the natural resource in dispute. The second legal basis was the statement that the rights of the two parties within the borders of the other party are reserved. A subtext reading of this statement reveals the attitude of the bureaucratic structure that declared it could not solve the resource-sharing problem. The bureaucracy, which cannot achieve the ideal result in resource sharing, protects the rights of both parties with a legal expression. Still, the expression used while doing this indicates an extremely abstract and ambiguous right. In cases where the border change request could create the same problem for the other party, the existing situation could be justified using the status quo concept. And finally, in cases where the state regulates its economic area through activities such as tourism, the claim of the peasants' right to use could be nullified by geo-administrative practice. Keeping all these in mind as the main framework, we can start to evaluate the conflicts.

The reason for the border dispute between the Taşköprü village of Bursa province and the Karapürçek village of Balıkesir province, which was decided in 1951, was to whom the pasture would belong. The claims of the authorized boards of the two provinces did not make reconciliation possible. Balıkesir Administrative Board demanded that the pasture, called *Sığır Çayırı*, either be opened for everyday use or connected to the Balıkesir district of Taşköprü village. On the other hand, the Bursa Administrative Board declared that this pasture, which is the life source of Taşköprü village, should be given to the people of Taşköprü so that both the pasture and the border conflict would come to an end. The Joint Committee, which examined the situation in the region, declared that it was outside of its jurisdiction to decide on the pasture dispute. However, due to the examination, the Board accepted that the conflict was in a position to cause undesirable events between the two villages. The delegation stated that it was impossible to reach an agreement that would satisfy both parties regarding the pasture's ownership. As a result, the topographically appropriate borderline has been determined by using the expression of reserving the property and usufruct rights of the parties that would remain within the borders of the other party. The mixed board did not hesitate to use two different arguments as soon as it could not come up with a suitable solution to the local claim. The first of these arguments was lack of authorization, and the

second was that the right of ownership and usufruct on the opposite border was reserved.⁸⁵

The conflict between the provinces of Erzincan and Gümüşhane in 1951 is another example of the geo-administrative practice. This example was on a plateau used by many villages at certain times and with complex property and usage rights. Erzincan and Gümüşhane provincial administrative boards aimed to base all these complex property relations and border claims on official records. While the Erzincan administrative board showed that there was no need to change the existing border, the Gümüşhane board demanded that the part of the said plateau on the Erzincan slope of the Sipikor Mountains should be given to the Erzincan villages and the pieces on the Gümüşhane side to the Gümüşhane villages. The general assembly, which examined the dispute, stated that this plateau had always been within the borders of Erzincan and that the situation was evident in the land registry and tax records. The assembly also stated that if the borderline demanded by Gümüşhane is accepted, the same difficulties will arise for the villages of Erzincan. It was also said that there was no reason to change the way things are now under these conditions.

⁸⁵ BCA BATDB [30.11.1/224.21.13], 31.05.1951

Another dispute occurred between the Garipçe village of Antalya and the Ürgütlü village of Burdur on meadows. 1338 was the oldest date on which the claims of the two provinces were based. Considering that the border was determined in 1953, it can be concluded that the conflict continued for at least thirty years. According to the Antalya administrative board, the disputed meadow was transferred to the state treasury from Dimitraki in 1338. In the border drawings made in 1932 and 1937, this land was shown within the border of Garipçe village. The Burdur administrative board, on the other hand, stated that the land mentioned by Antalya was not the meadow in question, but another arable land, and the incompatibility in the acreage of the mentioned areas was evidence of this. The borderline put forward by both administrative boards had no legal value since the opposite village had not approved it. In its examination of the disputed area, the central committee determined that the places claimed by the two sides as fixed points did not have the characteristics of fixed points but had features that can change over time and are uncertain. Examples of this situation were that a strong person could easily replace the stone suggested by Garipçe village as a fixed point or that the tree indicated by Ürkütlü village could no longer be detected in that region.

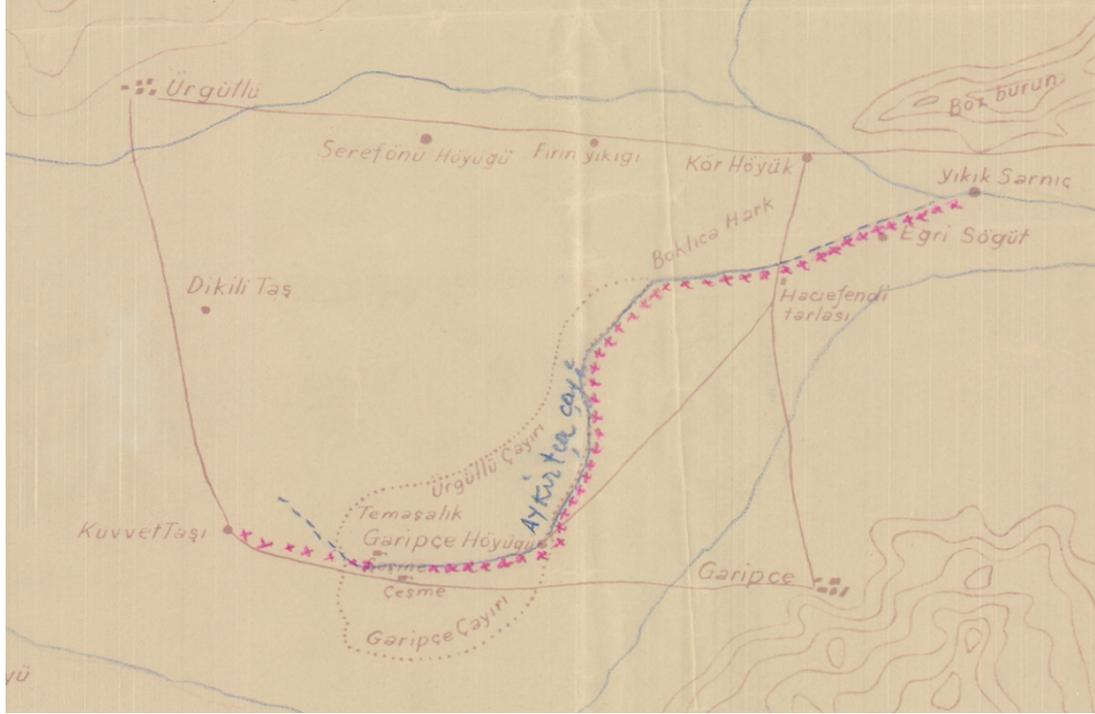

Figure 7. The Sketch of the Boundary Between Garipçe and Ürgütlü Villages (taken from BCA BATDB [30.11.1/241.33.18],13.11.1953 p.4)

After examining the official records and listening to the statements of the *Ehl-i Vukufs*, the central committee, which could not identify a clear borderline, determined the border as the line following the Aykırtça stream. This line divides the disputed meadow precisely in the middle following, as illustrated in the sample sketch. It seems that we are faced with a staff that drew the borderline topographically instead of responding to the claims of the two sides and determining the meadow's belonging. A resource-sharing dispute was converted to an administrative boundary issue and resolved accordingly. However, the reasoned decision did not include any statement regarding the natural resource dispute's resolution or future.⁸⁷

⁸⁷ BCA BATDB [30.11.1/241.33.18],13.11.1953

Although the claims and demands of the two villages were dealt with in detail in the reasoned decision, the border was determined as another line apart from the needs of both villages. As for a reason for this, it was stated that the boundaries of the two provinces should follow the field's unchanging, natural, and geographical roughness. As seen in the sketch, the border was determined by following the streamline on the surface. Although the said line left even the titled land of Köselier village at the border of the opposite village, the classical bureaucratic expression "*the property right of the land within the opposite borders is reserved*" was used as the necessary legitimation strategy to eliminate this problematic situation. In this example, it can be seen that although the bureaucracy listened to the claims of both sides in detail and noted them down, they chose not to include these demands and claims in the decision-making process for the sake of drawing a geo-administrative border.⁸⁸

The geo-administrative mentioned above decision-making practice of the bureaucracy was manifested not only in disputes over pasture, plateau and meadow but also in disputes over forests. The border dispute, which has been going on for years between six villages in the province of Tokat and 5 villages in the province of Ordu, was resolved in 1957 by the authorized committee. The border line demanded by the administrative boards of the two provinces was specified in detail, and it was stated that an agreement could not be reached. The disputed boundary line was approximately 25km long and thus required a survey of very rough terrain in detail. The committee determined that the main reason for the problem was the desire to include the pasture, wetland, and forest lands that the surrounding villages had used together for a long time within their borders. Finding these demands understandable since the villages of the parties make their living from animal husbandry, the committee stated that this border will play an administrative role and that the two sides will continue to benefit from the lands they have used jointly for a long time.

⁸⁸ BCA BATDB [30.11.1/247.31.5],28.10.1954

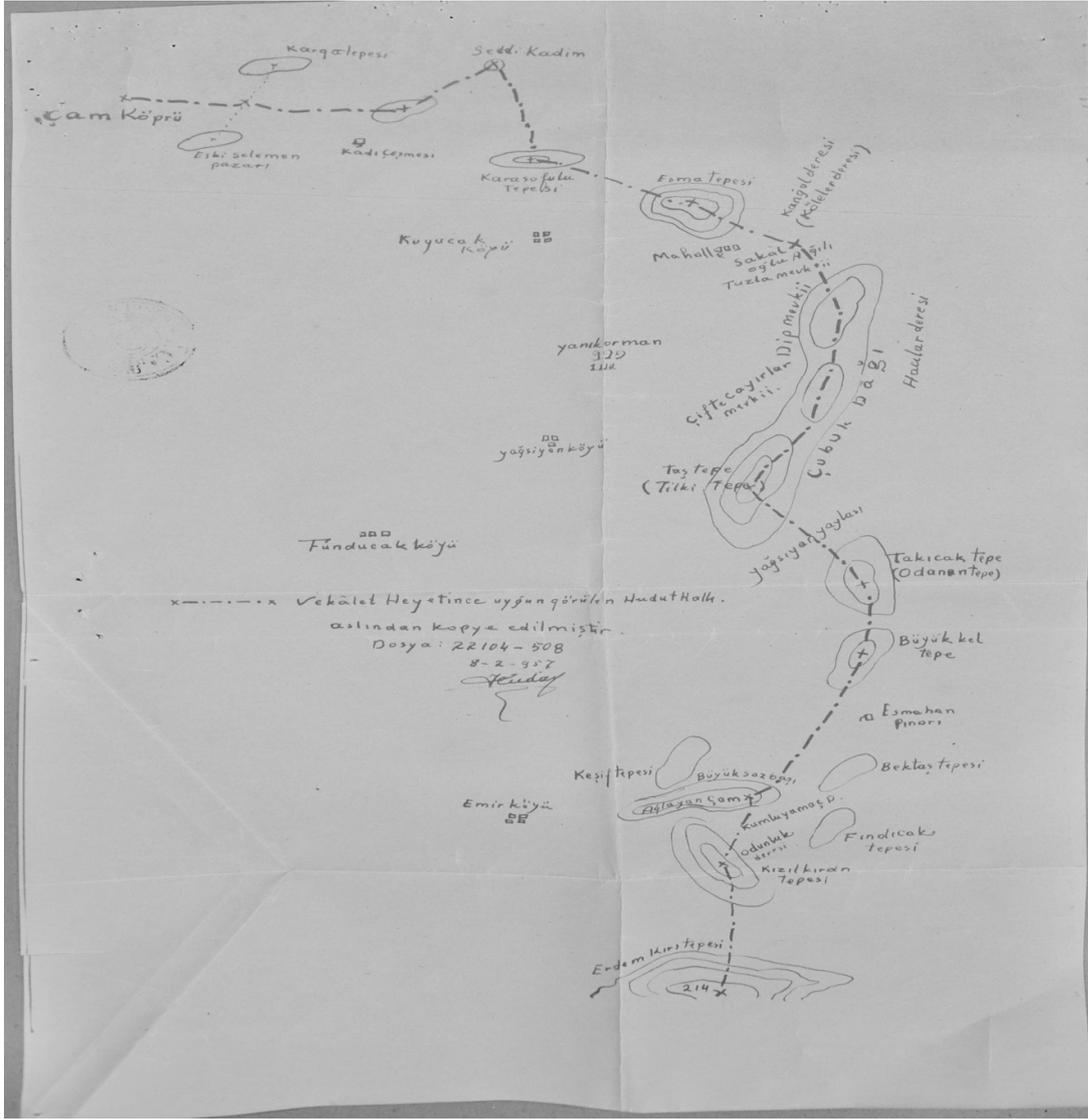

Figure 9. The Sketch of the Boundary Between Villages of Ordu and Tokat Provinces (taken from BCA BATDB [30.11.1/263.6.15], 27.02.1957 p.8)

As can be seen from the sketch, the line drawn on the summits of the hills in the region was determined as the border, regardless of the economic claims of the opposite villages. As a legitimacy mechanism, the emphasis on administrative borders and the continuation of the former rights of the parties were put forward.⁸⁹

Beyond all these examples, some very rare concerns could also be the defining element of geo-administrative practice. With the law numbered 5614, it was decided to connect

⁸⁹ BCA BATDB [30.11.1/263.6.15], 27.02.1957

the surroundings of Lake Abant to the province of Bolu and to transfer the regional administration to the Special Provincial Administration of Bolu. The people of two villages, administratively affiliated to the Mudurnu district but located very close to the Abant region, had applied to the provincial administration, declaring their difficult situation and demanding a border re-arrangement. They stated that they graze their animals in the Abant highlands, obtain their subsistence wood from the forests in this region, and spend most of the year residing in these highlands. The fact that the Abant region was connected to the Bolu province due to tourism activities prevented the villagers from accessing the natural resources in this region. As a solution, they demanded that the region they used to be connected to the Mudurnu district maintain their subsistence economy. Article 5 of Law No. 5614 states that agricultural production and animal husbandry cannot be done in any way in the specified area.

For this reason, the only way for the villagers to access their natural resources was to connect the claimed area to the Mudurnu district. However, the bureaucracy unequivocally rejected this request, and no alternative solution was developed for the villagers' situation in the reasoned decision. It has also been stated that no village or person can benefit from the region mentioned above, and there is no land belonging to any village in this region. It was also noted that this decision was taken in the name of administrative and security concerns. Although it was impossible to determine to what extent the villagers' claims were valid and accurate, the bureaucratic staff's clear response was clearly against such a demand that could have a significant impact on the village economy. This approach, which we try to put forward in this section and call geo-administrative practice, emerges as a serious administrative behavior to village border disputes.⁹⁰

In another example where geo-administrative practice can be seen, although the joint committee, which had previously examined the border dispute between the two provinces between the Eski Ömerler village of Kayseri and the Yukarı Hasinli village of Yozgat, reached an agreement, there were problems in the application of the agreed border line to the land. The main reason for these problems was that the two villages could not agree on the places used as a fixing point on the land; hence, they described

⁹⁰ BCA BATDB [30.11.1/269.13.20],03.05.1958

the same places with different names. The first subject of dispute was the sharing of pasture and arable land. With the separate mixed board sent to the site of disagreement, both these resources were tried to be shared, and the problem of applying the first drawn line to the land was solved. However, according to this committee, it was impossible to determine a line that could definitively separate the pasture and arable land.

On the other hand, it was possible to find a line suitable for an administrative border in terms of topography. For this reason, it has been deemed appropriate to draw a boundary line that will follow the peaks of the elevated points. In the written explanation of the decision, it was said that the parties' rights to the fields and pastures inside the other party's borders would be kept and that they could keep using these resources as they had before.

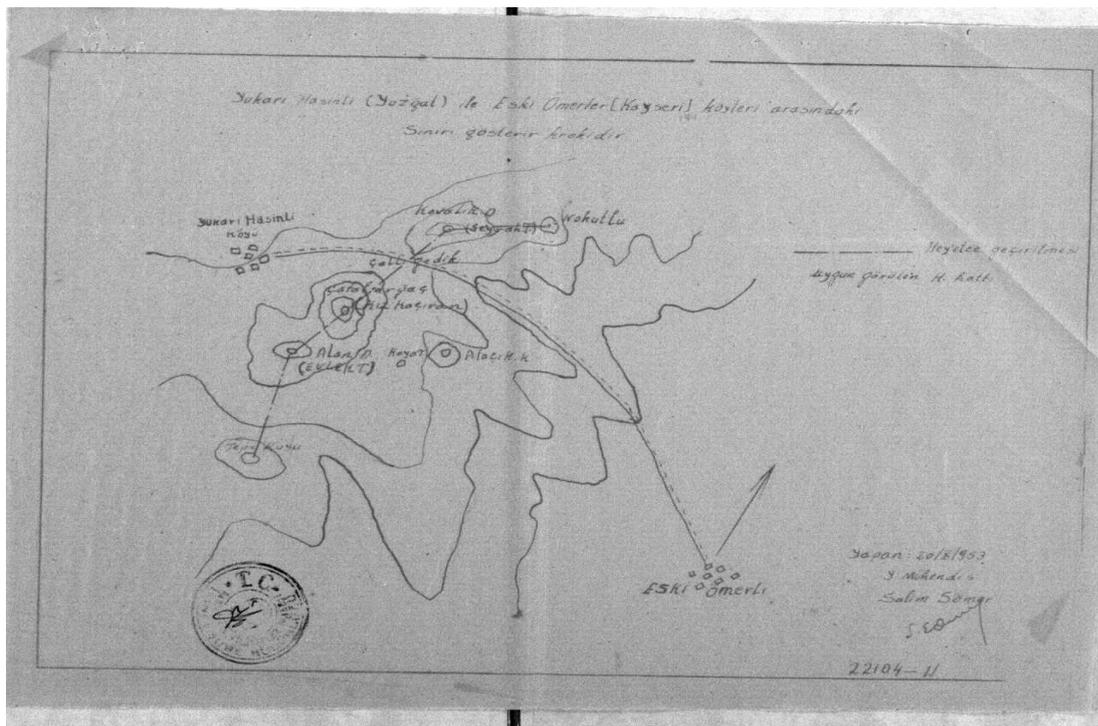

Figure 10. The Sketch of Boundary Between Eski Ömerler and Yukarı Hasınlı Villages (taken from BCA BATDB [30.11.1/243.2.11], 16.1.1954 p.6)

As seen in the sketch, a line has been identified starting from Nohutlu Hill and ending at Tepekuyu. Although this line successfully followed the elevations, it did not offer any solution to the pastures and lands that constitute the main reason for the conflict between the two villages. In this example, it can be seen that the conflict arising from the basic economic and vital needs of the villagers, such as pasture and arable land, has been tried to be resolved by border lines drawn with a geo-administrative perspective, without including any reference to the resolution of the main conflict. While it is clear that there was a solution for the state apparatus, the bureaucracy turned a blind eye to the economic problems of the peasantry.⁹¹

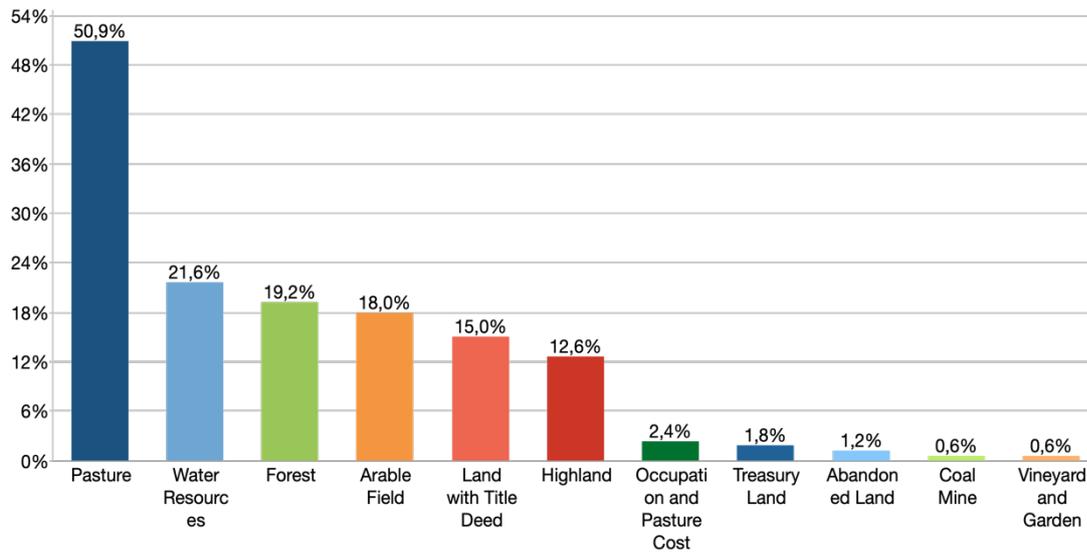

As a result, it is seen that the bureaucratic structure, which revealed the economic reasons for the disagreements and put forward the claims of the two sides in the reasoned decision, made decisions following geo-administrative practice during the decision phase. As seen in the examples, this approach, which overshadows local rights claims over the topographic plane, is important in showing how the *tunnel vision* of the state apparatus came into force, especially where there were complex claims on land use.

3.3 Local Economic Practice of Statecraft

As stated above, the disagreements were purely regional resource sharing. The problem, drawn to the administrative border line, concealed the root cause of the problems and formed the practice of decision making. However, although relatively few, not all decision-making has primarily approached border disputes from a geo-administrative perspective. The Local-Economic perspective was also gaining importance in resolving local resource-sharing problems. As seen from the table, half of the disputes resulted from pasture claims. Respectively, water resources, forest areas, arable land, titled lands, and plateaus were also the types of resources in dispute.

⁹¹ BCA BATDB [30.11.1/243.2.11], 16.1.1954

Table 2. Types of Disputed Natural Resources (created by MAXQDA software)

This distribution in the examples of disputes examined was understandable in geography, where animal husbandry occupied an extremely important place. Pasture disputes are a common phenomenon since pasturelands cover one-third of the country's total area.⁹² In their pioneering study on pasturelands, Arcaç and İmsel revealed how important and sensitive this issue was for the local people. Due to the disputes over the pastures and other natural resources available for common use, occasional armed fights and even murders could appear. The situation proves that such conflicts are one of the main causes of security problems in rural areas.⁹³ The practices used in resolving conflicts that caused such serious problems naturally had to compromise from an administrative-geographical perspective to achieve equilibrium in the local economy.

As evident from the examples discussed below, in most cases, the central committees reviewed the same file twice. There were three main reasons for this. The first was that the boundary determined due to the disagreement between the parties could not be truly applied to the land. The implementation problem was that local economic

⁹² Arcaç and İmsel, *Mer'a ve Yayla Davaları Köy Orta Malları İdari Sınır Anlaşmazlıkları*, 2.

⁹³ Arcaç and İmsel, 3.

concerns were still in conflict. The second was the request for a re-determination of the border since the first border drawn deteriorated the economic and social balance of the people of one side of the village. The third is the result of the change in the demographic structures of the villagers since the first border line was determined. The common situation observed in the border lines drawn with a local-economic perspective was that the conflict was not resolved in the first and revised in the second review. In a way, the local-economic perspective was the revision mechanism of the administrative-geographical perspective. As long as you keep this general structure in mind, you can move on to the examples and continue the examination.

The border dispute between the Akköy village of Kayseri and the town of İncesu was concluded in 1946 with the determination of a borderline with the consent of both parties. However, after a short time, Akköy village applied to the authorities about the dispute and asked for a new border allocation. The reason for this request by Akköy villagers was the injustice they claimed to have encountered during the implementation of the borderline on the ground. According to the allegations of Akköy villagers, İncesu Municipality and Farmers' Property Protection Organization acted against the rights of the Akköy villagers. They encroached on and damaged the lands around the border owned and actively used by the Akköy people. In addition, they stated that the animals brought to the Sultan lake, offered for joint use by the central committee, were taken to the town of İncesu under the pretext of border conflict and fined. As stated in the reasoned decision, border determination was requested once again due to the prevention of such "*extreme*" situations. As a result of the investigation, the central committee made an effort to determine a new borderline to eliminate these "*unfair*" practices against one side. As a result, we are faced with a bureaucratic structure that only examines such local economic and social demands and decides on the boundary allocation. In this example, it can be inferred that no geographical or administrative concerns were taken into account by the central bureaucracy. The bureaucrats, who had defined the situation as *extreme* and *unfair*, did not hesitate to redefine the borders to prevent this situation.⁹⁴

⁹⁴ BCA BATDB [30.11.1/215.22.19],5.7.1950

Although the primary purpose of bureaucratic cadres was to build lines that would not cause conflict in the future, it is obvious that this has not been achieved in many cases. We will analyze two different disputes that can be shown as examples of this situation. The main point, similar to each other in these two examples, was that although the dispute files were examined and decided by the authorized boards, the disagreements continued and resurfaced approximately ten years later. Different delegations examined once again the similar conflict between the same villages. It is noteworthy that the concerns and methods of the bureaucracy in such recurrent cases had to be much more solution-oriented regarding social and economic perspectives. The Central Committees were eager to consider local demands by waiving the consuetudinary geo-administrative practice to settle issues. The first example of this situation was the long-standing conflict between 12 different villages in Ankara and 7 different villages in Bolu. The first date this dispute was handled as a border conflict was in 1943. Although there was no information on the cause of the disagreement in this first reasoned decision, the statements of the two provincial boards regarding the disagreement are remarkable. The central committee examined the land, estates, and animals owned by the villages of both parties in the disputed area. It was noted that while thinking about the proper solution, the committee evaluated the parties' needs, property, and usufruct rights. It has also been stated that the decision was taken to eliminate this bad situation that lasted for years, retaining the people of the two parties from their work, causing them to wander in the courts and causing material and moral damages that are difficult to overcome and to ensure that the villagers act as neighbors within the framework of mutual love and respect. This form of expression illustrates that decision-makers consider all the *de facto* and legal rights of the villagers on the land. They also emphasize the ideal social relationship between the villagers and the parties to the dispute. In addition, the bureaucratic language shows that the central committee was aware of the burden on the villagers. However, we can infer from the recurrent confrontation between the same villages in the same region in 1952 that this intention and awareness of bureaucracy did not find a complete response among the villagers. In the reasoned decision of 1952, it was stated that the cause of the disagreement was the conflict in applying the borderline defined in 1943 on the land. However, the bureaucratic discourse expressed how to solve the problem more clearly this time. Accordingly, although it is possible to draw the border in the disputed region

following the perspective of topographical suitability, it has been clearly stated that this geographical framework would not provide the pasture needs of the disputed villages. Besides, if insisting on using the geographic framework, the villagers whose disagreements had ended in the previous review would also conflict. For this reason, a borderline considering the rights of property and usufruct of the villagers was determined instead of an administrative line suitable for the geographical situation. Since we did not encounter another dispute file between these villages until 1960, it can be thought that this attitude, which takes local claims into account, worked properly until the 60s.⁹⁵

Another example where the geo-administrative bureaucratic practice was put aside, and the problem was solved by deciding according to the social and economic situation in the region was between Atçılar village and Yuksek, Kızıltepe and Örlemiş villages of İzmir province. The dispute arose due to the encroachment of the villagers of Yuksek, Kızıltepe and Örlemiş on the acorns, pastures, and lands owned by Atcilar village with a title deed. Authorized boards reported that Atcilar village had less need for pasture than the other three villages and that acorn trees should not only belong to Atcilar village but should be available to other villages. They argued that it would be right and just to open such trees for common use with other villages and give the pastureland to three villages in distress. To legitimize this claim, the authorized regional committee, which compared the population of Atcilar village with the other three villages, declared that the population of the other villages was ten times higher than that of Atcilar village. If the border line proposed by the authorized regional board were accepted, the living conditions of the villages in question would be improved, and the problem would be resolved. However, the ministry-appointed committee stated that the ownership of the aforementioned trees and pasture to the village of Atcilar had been proven with the title deed and that the property right, which is protected by law, could not be violated. As a result, the border should be drawn according to geographical criteria. Thus, the central committee drew a geo-administrative boundary following the line through the peaks of hills by rejecting the

⁹⁵ BCA BATDB [30.11.1/236.6.2], 24.02.1953

socially and economically-oriented claim of the provincial administrative board because it was against the right of ownership proven by deed.⁹⁶

Immediately after this decision was sent to the provincial council, the councils of elders and headmen of the mentioned villages applied to the Ministry. They demanded a re-examination of the situation by stating that their village was imprisoned in a narrow area, and they could not find pasture to graze their animals, which is national wealth. Their rights that they had been using for a hundred years were taken away from them, and even their cemeteries were left on the opposite border. As a result of these serious expressions, which were designed to gain consent for further elaboration, the ministry accepted the re-examination and sent a delegation. This new central committee made its decision by summarizing the social and economic structure of the region in detail. In the reasoned decision, which briefly explained the geographical situation, it was mentioned that the agricultural facilities are almost impossible owing to the high mountainous landform. Therefore, animal husbandry and acorn trees are very valuable economic sources for the local people. Water resources in the region are very limited and subject to conflicts. In general, it has been stated that the region is very poor in terms of natural riches and that the villagers have difficulty maintaining their existence, and sometimes they have no choice but to leave. Explaining with examples that the region is very poor in terms of natural resources, the reasoned decision also noted that the ruins of Demirci and Kırışlı villages, which had left this place before, are proof of this situation. The delegation resorted to various expressions to explain the regional situation's difficulty. In the decision part, the boundary was determined by pointing out the needs and close relevance of all elements of the conflict. The interesting point is that a romantic narration through Demirci and Kırışlı villages is also included in the text of the decision. This form of expression is important in terms of justification for the idea that the existence of the other villages in the region may be endangered if local needs are not observed. As a result, the villagers, who thought they had suffered a serious injustice due to the first decision, requested a re-examination. At the end of this demand, villagers ensured that the injustice they encountered was included in the reasoned decision in detail through the language of

⁹⁶ BCA BATDB [30.11.1/224.25.6],23.06.1951

the bureaucracy as a form of expression. The provision of justice in the second examination shows how effectively the villagers can play in the demarcation process, expressing their needs, concerns, and solutions in an impressive and ideal way. As we mentioned in the previous section, although the border-drawing process seems to be only bureaucratic and administrative, the role played by the locals should not be denied. It is important to consider this whole process as complex, multifaceted, and variable.⁹⁷

One of the most important situations we encountered in the border drawing process was the bureaucracy's tendency to draw administrative and geographical borders in disputes regarding pasture areas. The legal framework offers the statement that resolving this situation is beyond their responsibility. However, the pasture dispute between the Çeşmekolu village of Kırklareli and the Kumrular village constitutes a contrary example to this situation. Although the issue was handled as an administrative border dispute, the issue of resource sharing, such as pasture, which is the basis of animal husbandry, has been tried to be resolved by considering the needs of both parties. Although Çeşmekolu village claimed that there was no other land on which to graze their 2,639 animals, Kumrular village, in response to this claim, argued that Çeşmekolu village had its pasture but that this land had been converted into agricultural land by themselves. According to the information received from the Office of Foundations, the villagers of Çeşmekolu have been renting the pastures of the Gazi Hasan Pasha foundation since 1341 (1923-24). This information proves the claim of the villagers of Çeşmekolu. Although the District Governorship reported that Kumrular village has 1200 decares of pasture, this figure did not reflect the truth. According to the information given by the land registry officer in charge of measuring the pasture between the two villages, there were 3610 decares of pasture between these two villages. In other words, even if the demand of Çeşmekolu village is fulfilled, approximately 1693 decares of pasture will remain on the border of Kumrular village from this area. This was a very good and reasonable amount.

On the other hand, if the claim of the Kumrular village were accepted, the village of Çeşmekolu would be complete without pastures. Their advanced livestock activities

⁹⁷ BCA BATDB [30.11.1/234.29.10], 18.10.1952

would be severely damaged or even destroyed. Handling all these data without any reference to geographical and administrative conditions, the central committee decided a borderline only considering the needs of Çeşmekolu villagers and the economic balance in the region.⁹⁸

Another example of a similar approach can be seen in the dispute between Postallı and Üskül village of Niğde province. From 15-20 years ago, the villagers of Uskul transformed their pasture-like lands into agricultural lands, and they did not have enough land. On the other hand, although the village of Postallı was more crowded, it was also self-sufficient in terms of arable land and pasture. According to the *Ehl-i Vukufs*, Postallı village was periodically leasing some of its lands to the nomads and tribes in the region. The land where the dispute is in question was also in the region that Postallı has rented out, and they want these areas to stay within its borders and not be deprived of this rental income. In the light of these data, the Central Committee decided to determine the border, taking into account the needs of Üskü village, without having to give specific reference to geographical and administrative concerns.⁹⁹

The dispute between Derecikviran village in Balıkesir province and Söğütcük village in Manisa province is another example that was resolved by considering the requirements of the regional economy instead of the understanding of natural and topographical borders. Balıkesir administrative board stated that the border between the two villages had been the Simav Stream *from time immemorial*, and this border was also approved in the determination process in 1948. According to the agreement made by the two sides, the animals of the two villages would not cross the other side of the Simav Stream. Based on this agreement, Derecikviran villagers stated that they prevented the animals of the opposite village. They even referred to the law numbered 5618, which the central bureaucracy frequently applied in the other disputes, and stated that the conflict should be resolved concerning this law instead of demarcation. Considering the claims of the Balıkesir administrative board, it can be thought that they satisfy the bureaucratic mind that makes decisions regarding administrative and geographical conditions. However, Söğütcük village was able to eliminate this rational

⁹⁸ BCA BATDB [30.11.1/250.13.15], 14.04.1955

⁹⁹ BCA BATDB [30.11.1/250.8.2], 25.02.1955

and legal explanation by devising an argument in the context of their harsh economic and social conditions. The villagers of Söğütçük stated that they were able to make use of the disputed land. At the same time, it was connected to the province of Balıkesir, and this land was suitable for common use, and they lost this right when their village was connected to the province of Manisa and therefore demanded the change of the border. The way the central committee evaluated the situation was exactly in the same direction as the villagers of Söğütçük. Stating that the village of Söğütçük is located on a very narrow land at the foot of the mountain due to its topographic structure, the central committee emphasized that the land opposite the Simav Stream should therefore be opened to the use of the villagers of Söğütçük. Otherwise, these villagers would be in a very difficult situation, and they would face the danger of not being able to continue their activities in the said narrow area. If the claim of Derecikviran, which was legally, administratively and geographically perfect, were accepted, Söğütçük village would have been cut off from the crucial land which was very valuable to them. The bureaucracy, which did not find this situation appropriate, accepted a less distinctive line from the perspective of geo-administrative statecraft instead of a distinctive border line such as Simav Stream.

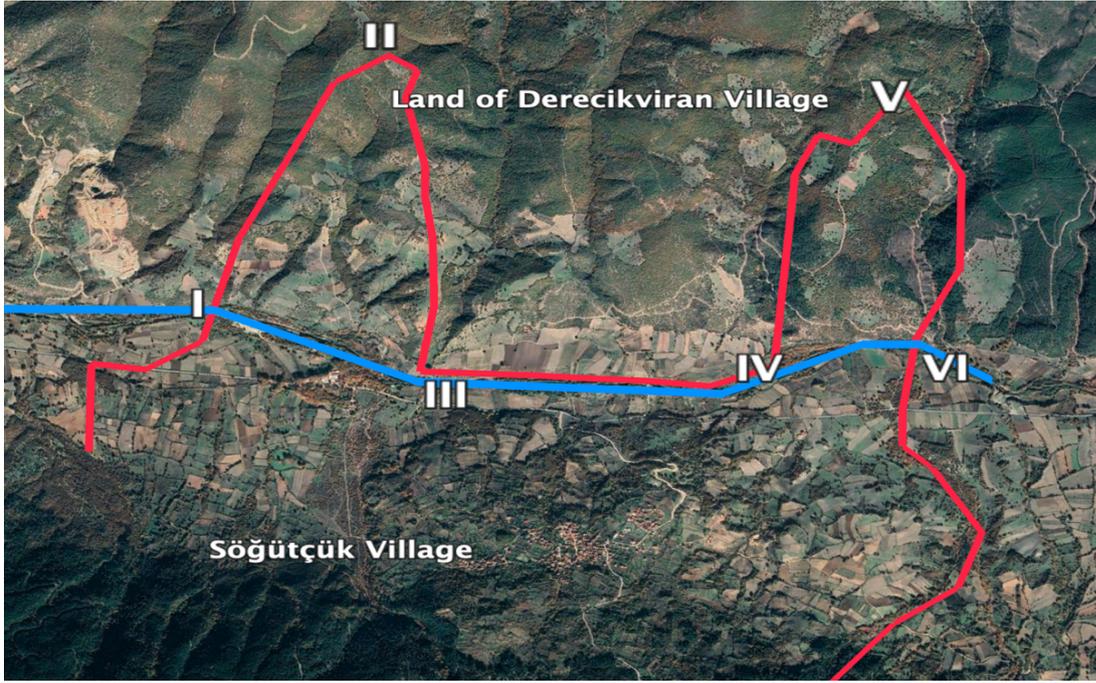

Figure 11. The Satellite View of Administrative Boundary Between Derecikviran and Söğütçük Villages

The decision rendered in the dispute is equivalent to the present border of Söğütçük village and Derecikviran village, therefore Balıkesir and Manisa provinces. Looking at the Bird's Eye map of the region makes the attitude of the bureaucracy more understandable. Simav Stream is indicated in the image with a blue line, and a red line indicates the administrative and two village borders. When we look carefully at the bottom left of the image, it is understood that Söğütçük village was located in a narrow area, and it was not possible to expand towards the south. I, III, IV and VI. points show the intersections of the Simav stream and the border between two villages, while points II and V show the areas that do not follow the Simav stream of the border and were included in Söğütçük village. I, II and III form the land structure in the triangular region. These points can easily be determined as a suitable area, even today, for agriculture and animal husbandry activities. In almost all cases, the central bureaucracy, which tends to consider the river in the region as the natural border line, decided differently in this example and considered the social and economic needs of Söğütçük village despite the geographical conditions.¹⁰⁰

¹⁰⁰ BCA BATDB [30.11.1/254.37.1], 5.11.1955

The pasture dispute between the Ergen village of Hozat district in Tunceli province and Ulupınar and Erindek villages in Pertek district can be considered a good example since it takes place in a geographical location with a different political connotation than the examples we have examined so far. The pasture dispute in the region, described by the official authorities as a controversial land that had to be controlled ethnically, religiously and geographically since the Ottoman Empire, was naturally handled in the context of the 1938 Dersim Incident. A pasture called Eşek Meydanı was the subject of disagreement among the mentioned villages. The central committee provided a brief and valuable historical perspective to investigate the work fully. Before the 1938 Dersim Incident, the Ulupınar and Erindek villages belonged to the Pilvenk tribe, while the people of Ergen Village pertained to the Abbas Uşak tribe. It has been stated that these two tribes used the pasture and its surroundings from time to time and that there was a continuous struggle between them on the issue of pasture use. Before the Dersim Incident, Ergen villagers benefited more from this land, as the Pilvenk tribe was a relatively less influential community under the pressure of the Abbas Uşağı tribe. After the 1938 Incident, the pasture in question passed under the domination of Ulupınar villagers. In 1939, a committee of officials representing the Pertek and Hozat District Governors examined the region to end the conflict and prepared a simple sketch that left the disputed pasture land to the Ulupınar villagers. The central committee, which arrived in the region in 1951, declared that this conflict was not a newly-emerged situation and that it had been repeated on different dates from previous years to this day, leading to severe conflicts. In the reasoned decision, the border was determined by stating that it was deemed appropriate by the committee to divide this pasture *fairly* for the two sides to benefit jointly. It can be understood that the people of Ergen village, who were strong before the Dersim Incident, dominated the use of pasture until the 1938 Incident. After this time, the pasture was transferred to the Ulupınar people due to the loss of power of the Abbas Uşağı tribe. One year after the Dersim Incident, the administrative committee that went to the conflict zone registered the region in the name of the Ulupınar people. It can be roughly assumed that one side (the Pilvenk tribe) was supported by the bureaucratic apparatus of the nationalist statecraft against the other (Abbas Uşağı tribe). In the demarcation

investigation of 1951, this situation was tried to be settled by considering the common interests of the two villages, probably after settling down the general political turmoil in the region. Even if this archive record, which offers small clues about central and local politics of the Republican period, has a lot to say with deeper research, when considered within the context of this thesis, it will be enough to state that the bureaucracy has acted only with the concern of making a *fair* natural resource distribution instead of an administrative one.¹⁰¹

The reason for another conflict between Yeniköy and Nimetiye village in Kocaeli province can be defined as expanding the border against the other party. Although the border between the two villages was drawn in peace with the agreement of the commissions in 1952, it turned into a conflict again as the Nimetiye villagers did not recognize the border of the opposite village and opened land within the border of the opposite village. Upon the Kocaeli provincial committee's application to the center for a solution, the central committee examined the region on-site and listened to the parties. According to the reasoned decision, which mentioned the historical background of the two villages, the villagers of Yeniköy had migrated from Greece thirty years ago and settled in this village. On the other hand, Nimetiye village was a local and old village. Since the two villages were very close to each other, the situation of acquiring land against the other side intensified the conflict. While the Nimetiye villagers, who cultivated fields and built houses in a forest area of 5 square kilometers within the borders of Yeniköy, wanted this area to remain within their borders, the people of Yeniköy demanded that this situation be prevented. The central bureaucracy accepted the legally unsuitable but de facto valid situation on the land. He also revealed the basis of legitimacy by stating that the unrest between the two villages would not end in any way if the disputed region were included within the Yeniköy border. The bureaucracy, which flatly rejects the claims of forested areas and always states that the forest is the state's property according to the law, had taken a different approach in this example. It legitimized the intervention of the Nimetiye villagers in the forests within the opposite village by violating the existing border line, opening agricultural lands

¹⁰¹ BCA BATDB [30.11.1/251.18.15], 31.05.1955

and building houses in these areas. The decision-makers reinforced the legitimacy ground of this decision with the claim that the dispute would not have settled down any other way. From a different perspective, it can be understood from this example that compliance with the legal framework was not always observed to accept the locally valid *de facto* property and usufruct regime. Another aspect that makes this example interesting is the information about the background of the villages in conflict. The emphasis on the fact that the people who make up the Yeniköyü village are Greek immigrants, while the Nimetiye village is relatively old and consists of the region's locals makes us think about whether this situation has an impact on the decision-making process. Although the aspect of the decision that legitimizes the actual economic situation on the land in favor of Nimetiye village makes this claim strong, it does not seem possible to reach a precise statement. This situation is only important in terms of illustrating that the archive document can be subjected to a different reading.¹⁰²

The border dispute in the Gökçekuyu and Çamlıca villages of Konya in 1956 constitutes an example of the administrative border drawn by considering the benefits of both sides. According to the inspection report of the central committee, the borders determined by the two villages did not coincide with each other due to the inconsistency of the place names. For this reason, it was essential to draw a new boundary. Two articles in the reasoned decision are particularly striking. The first is that Gökçekuyu villagers had a water line built from Oluk Mountain to their village at nearly 30000 liras. The Dereoluk spring, the source of this water, had been taken within the borders of Gökçekuyu villages without leaving any room for dispute. The second is that, on the Ömer Hacı plateau, the land that had the characteristics of pasture was plowed by the villagers of Çamlıca a long time ago and opened for agricultural activity. This land in question was left to Çamlıca villages. The reasoned decision envisaged the sharing of these two natural resources to resolve the border conflict at the expense of administrative concerns.

¹⁰² BCA BATDB [30.11.1/261.44.17], 12.10.1956

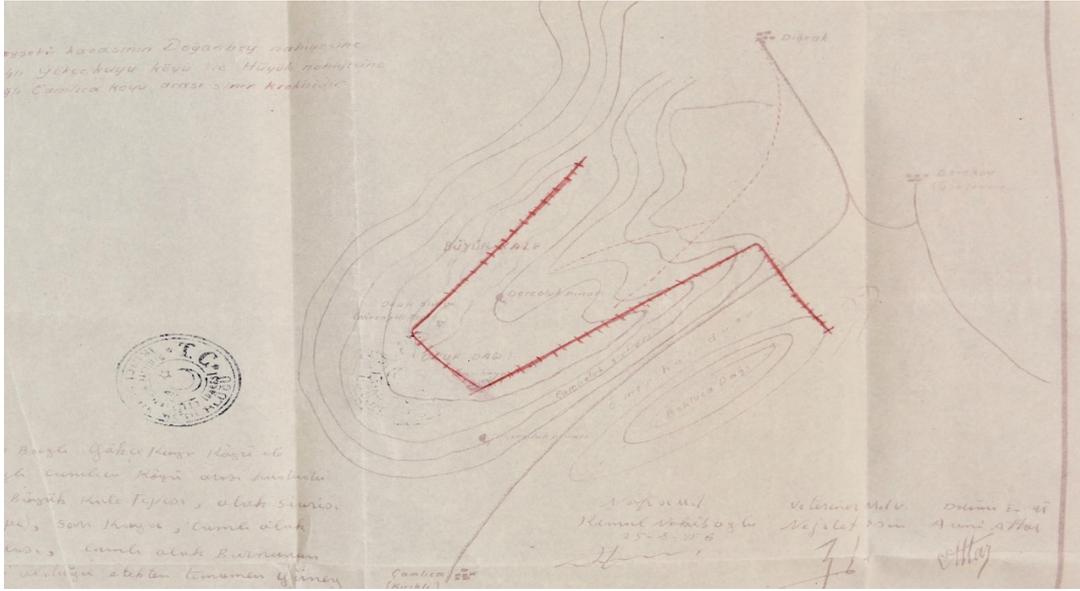

Figure 12. The Sketch of the Boundary Between Gökçekuyu and Çamlıca Villages of Konya Province (taken from BCA BATDB [30.11.1/264.9.6], 15.3.1957 p.6)

As seen from the drawn sketch, although the geographical concern has not been completely abandoned, the approach of following the peaks (*hatt-ı bala*) in the field of the border lines has not been fully complied with. Although the reason for the disagreement was stated in the reasoned decision about the incompatibility of place names, the policy of leaving the built environment created by villagers' efforts to each village also shows that the conflict may have arisen due to the problem in sharing of these resources. This may be a kind of speculation. But it is inevitably certain that the decision-makers once again went beyond just demarcating a border with an administrative meaning and appointed a borderline required by the real practices of these villagers.¹⁰³

The conclusion from these examples is that the central bureaucracy had, in some cases, evaluated the local claims fairly instead of always acting with an administrative and geographical concern. While doing this, it can be understood from the visuals that it had implemented some flexible boundary drawing processes, although it does not completely waive the topographical perspective. When evaluated from these

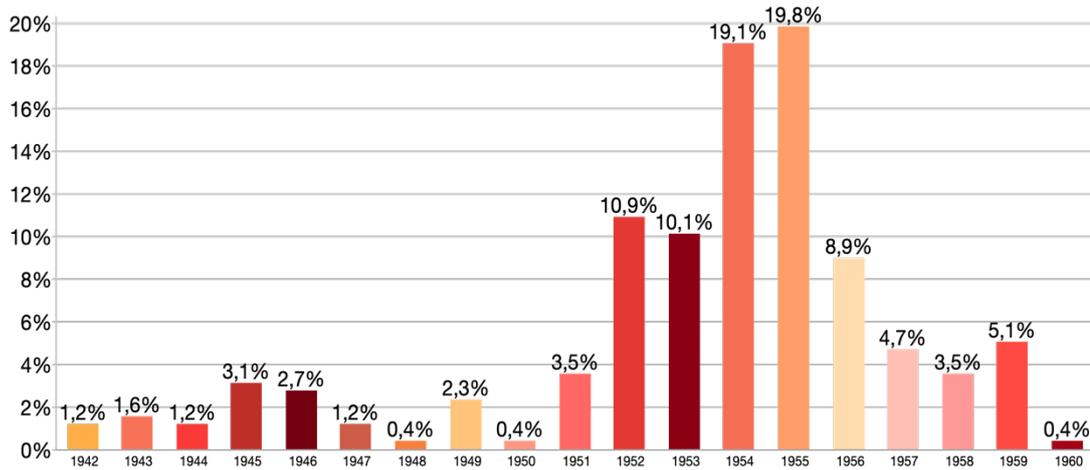

¹⁰³ BCA BATDB [30.11.1/264.9.6], 15.3.1957

perspectives, it is possible to think of the state apparatus as a conciliatory, complex organization that can also take care of local concerns instead of putting forward a structure that decides from its point of view with only top-down and coercive practices.

3.4 Conclusion

It is necessary to mention a study that confirms the approach in this section, which includes findings on the dual nature of bureaucratic decision-making. In the study carried out by a team of approximately thirty people under the management of Turhan Feyzioğlu and Arif Payaslıoğlu in 1955, a questionnaire was sent to the governors and district governors, who are the managers of administrative organizations of different scales, with questions under different headings. The statistical data that emerged from the examination of these questionnaires confirms the approach explained in this section. It will be useful to look briefly at the distribution of the provincial and district boundary changes according to dates and the reasons for these changes. According to the survey results, there has been a visible increase in border changes since 1951 and a clear increase since 1953.¹⁰⁴

Table 3. The Distribution of Disputes by Dates (created by MAXQDA software)

¹⁰⁴ Feyzioğlu and Payaslıoğlu, *Kaza ve Vilayet İdaresi Üzerine Bir Araştırma*, 32.

This data agrees with the statistical results of this study, as seen from the graph above. The claim that more democratic local administrations, together with the Democratic Party, take local rights claims more seriously has been expressed, albeit hesitantly.¹⁰⁵ In addition, statistical data based on the responses of local administrators regarding the reason for these border changes is also instructive. Accordingly, for geographical reasons, 44.7%; administrative reasons, 14.3%; economic reasons, 11.6%; demographic reasons, such as population growth, 6.2%; and finally, border changes for which no reason was reported to correspond to a total of 23.2%.¹⁰⁶ Geographical and administrative reasons amounted to 59%, while demographic and economic reasons remained at a low rate of 17.8%. This data, which was made from the answers local administrators gave about why the boundaries changed, shows that the Geo-Administrative practice is better than the Local-Economic perspective.

In this section, the decision-making process of the bureaucracy was discussed in general terms. Each conflict had different causes, actors, and situations within itself. These differences also affected those who managed the decision-making processes. Although the legal framework imposes a utilitarian tunnel vision, bureaucratic devices have tried to stretch this framework from time to time. Analyzing the decision-making process of the bureaucratic structure can also uncover serious ideas about the early republican state apparatus. As can be seen, this state apparatus has dealt with such complex problems within legal frameworks and has primarily tended to draw administrative-geographical boundaries. However, the bureaucracy knew natural resource sharing was also a serious problem. For this reason, although the geo-administrative perspective was generally preferred, it cannot be claimed that local economic and social situations are completely ignored. At this point, we can say that solving local economic problems was also seen as a kind of administrative mechanism, but it was different from the spatial approach.

CHAPTER 4

CONCLUSION

This thesis has attempted to examine the dimensions of the relationship between the republican bureaucracy and the villagers by focusing on two different questions. It aims initially to discover how the administrative demarcation process is affected by various factors. These factors are mainly studied in three dimensions: administrative, geographical, and socio-economic frameworks. The most fundamental element that determines the administrative framework is the legal basis. The Village Law of 1924 and the Provincial Administration Law, amended at different times, form the basis of the border determination processes. In addition, Law No. 4081 on the Protection of Farmers' Goods, Law No. 5618 on Land Distribution, Law No. 2644 on Land Registry, and finally, Law No. 2613 on Cadastre and Land Registry have also created the legal framework that bureaucracy does not hesitate to refer to. Depending on the practical use it is put to, this legal framework can take different forms.

In most cases, this is due to two fundamental reasons. The first problem is that the legal sphere lacks a standard format. Another aspect relates to the utilitarian perspective of decision-making mechanisms, where each example presents its own set of specific dynamics. Another critical dimension of the administrative framework is the security concerns of the state apparatus. Even though this worry isn't just about the safety and security of the villagers, the ability of state law enforcement officers to move around is a key part of drawing the border.

The geographical framework is an important indicator of the state's view of rural space. The majority of the cases examined revealed that it was preferable to have the borderlines follow the topographic plane. The reason is related to the nature of the concept of a boundary. By its nature, the border is an abstract concept and can be perceived differently for various subjects. As this thesis illustrates, the border

perception of the bureaucratic apparatus and the local people can seriously diverge. While the border concept for bureaucracy becomes an administrative line, it takes the form of natural resource sharing for villagers. The topographic concern allows the reflection of the borderline, an abstract concept, onto a clear and concrete plane. As a concrete indicator of the boundary line, boundary stones were erected in regions with flat terrain. Topography is not the only determinant of the geographic framework.

Authorized bureaucratic committees can't have information about each village regarding geographical, social, and economic aspects. The bureaucracy must deal with every dispute from a single perspective, yet it is based on different actors, backgrounds, and problems. The officials consult with people aware of the local dynamics to become informed of all these differences, even if only superficially. The institution of *ehl-i vukuf* is a mediating force at this point that encompasses the integration of local knowledge with the central perspective. The bureaucracy deepens its perspective on the locals through these people. In a state apparatus with low cadastral capacity, where the border lines have to be expressed verbally with certain points on the land, the harmony between the local colloquial names of these fixed points is important. This job has been done by the *ehl-i vukuf* and has been evaluated in a geographical context.

The Socio-Economic framework, on the other hand, is useful as it shows that the bureaucracy can deal not only with administrative concerns but also with the real-life problems of the peasants. The expression "time immemorial" is a form of expression that is often used to strengthen the claims of the villagers. To prove that land or natural resources belong to them, the villagers want to create a ground of legitimacy by stating that they have been in use for a long time. When villagers lacked legal documentation to support their claim to a piece of land, they turned to the term "*time immemorial*." Bureaucratic cadres also often resorted to this form of expression. The bureaucracy's historical references' objective was to preserve and legitimize the current socio-economic order. Otherwise, it would be necessary to allocate a new natural resource use pattern in the conflict zone. This was not a process that the bureaucratic apparatus would like to be the subject of. For a long time, central bureaucratic structures considered it a risk to interfere with socio-economic structures in rural areas for a long time and took their validity from tradition. Thus, the expression form, *time immemorial*

in the language of the peasants, turns into the *status quo* in the language of the bureaucracy. Apart from that, there is also a tendency for both the bureaucracy and the peasantry to refer to human and animal populations. Villagers raised demands regarding the disputed area to understand the importance of establishing a population and land balance. When making decisions, the bureaucracy also takes this balance into account since an imbalance in local economic needs would keep the war going.

Agricultural safety is the last sub-topic discussed in the socio-economic framework. The basic idea behind agricultural security is that the other party cannot exploit the cultivated land of the first party. The bureaucracy does not wish to create a border that threatens the agricultural yield. On the other hand, the villagers also demand a borderline that will eliminate this danger to their only source of livelihood. All of these factors have a direct impact on bureaucratic decision-making and peasant maneuvering.

Considering the methods and factors used in determining village boundaries, it is inevitable to get an idea of the complexity of the boundary-setting process. On the one hand, the central bureaucracy, which tries to make decisions through an incompatible and intertwined legal framework, stands out. On the other hand, some peasants pursued their economic claims. These claims are sometimes made over property rights and jointly-used natural resources. Considering the complex land ownership system in the countryside, which the republican regime took over, it can be argued that the central bureaucracy could not resolve all these complex property and land use disputes in the local area. Each dispute case had different subjects, historical backgrounds, and issues. Even within each dispute, there were serious deviations in these respects. The methods developed by the administrative mechanisms to deal with this complex situation help understand the perspective of the modern state apparatus, which James C. Scott defines as *tunnel vision*. This point of view shows how to apply an abstract understanding of boundaries and idealized rules to different situations in the real world.

Another question that this thesis seeks to answer is to what extent the bureaucracy looks at the disputes over sharing local resources in the context of administrative and local demands. This question is addressed in the second part of the thesis. In the first approach, called the Geo-Administrative perspective, the decision-makers strictly

followed the topographical and legal framework, ignoring the vital demands of the villagers. This approach is evident in virtually all the reports analyzed regarding border determination. The Local-Economic perspective, on the contrary, describes situations where decision-makers renounce the topographical and legal framework for the sake of local demands. In the border determination reports we reviewed, decisions were made primarily within the framework of the Geo-Administrative perspective. So, it's clear that the Geo-Administrative framework is used most of the time by people who make decisions.

When we examine the literature and legal framework on the subject, different bureaucrats have stated clearly that an administrative border is not the limit of the natural resource's right to use. Villagers have also been accused of being ignorant, claiming they do not comprehend what is happening on the ground. The bureaucratic cadres, which talk inside the legal framework, and the peasants, seeking to sustain their subsistence economy, were clearly at odds. There is an allegation in archival sources and literature that the villagers could not grasp the concept of administrative boundaries. According to the bureaucratic mind, the villagers wrongly perceived the issue through the lens of resource sharing. A major argument of this thesis centered around critique made against this partnership formed between bureaucracy and judiciary against village society. This argument is on the fallacy of the Administrative Boundary Disputes conceptualization. Disputes between villages concerning limited and high economic value lands such as pastures, summer and winter quarters and forests were unrelated to the administrative sphere. Although the bureaucracy attempted to resolve disputes by reducing them to the problem of administrative boundary, the fundamental nature of these disagreements has not changed. The cooperation between the bureaucracy and the judiciary has taken the resource-sharing demands of the villagers out of their context and placed their evaluation within an administrative framework to satisfy the state's desire to have its administrative map.

In addition to all these, this thesis confirms to a certain extent the claim in the literature that the villagers were more visible in the political arena with the Democratic Party administration. From 1951, the noticeable increase in the number of border determination reports continued until 1960, although it lost momentum towards the end. However, it should be clearly stated that there may be many other reasons for this

situation. These reasons are beyond the explanatory power of the archival documents on which this study is based. On the other hand, although this thesis initially aimed to obtain more detailed information on the subsistence economy of the peasantry and the socio-cultural and socio-economic dimensions of the conflicts, this was not possible due to the structural inadequacy of the archival documents. This situation is because the archive documents deal with the demarcation task entirely in the administrative dimension.

Most of the documents concerning the border disputes between the villages are kept in the Archives of the General Directorate of Land Registry and Cadastre. However, none of these records are available to researchers. One of the reasons for this is that border disputes continue in the countryside. For this reason, these archival records can only be accessed when requested by judicial authorities or chief officials of villages. The absence of these records, which are closed to researchers with the argument of violating the principle of property confidentiality, caused this study to be somewhat incomplete. Undoubtedly, future studies on this subject will yield more holistic results on border disputes in rural areas.

APPENDICES

A. AN EXAMPLE OF ARCHIVAL SOURCES

An example of The Reasoned Decision on the demarcation process between Yahşiler Village of Denizli Province and Seki, Eymir Villages of Aydın Province

Source: Başbakanlık Cumhuriyet Arşivi (BCA) Bakanlıklararası Tayin Daire Başkanlığı (BTDB) 241-33-19, 11.11.1953. p.5

3-Denizli Vilayeti İdare Kurulu 9/11/1951 Gün ve 553 sayılı mütalaaında;

Denizli Hey'etinin Raporda belirttiği gibi Eğmir sınırının Yahgiler köyünün Kükcüler mahallesi evlerinin duvarlarına sürünerek geçmesi, Gökçüler mahallesi halkının Eymir sınırı içinde kalan sahadaki tapulu, tapusuz mezru arazilerinden faydalanmak maksadıyla bu saha ile her zaman alakalı bulunması dolayısıyla ihtilafların halledilmiş olma-ya-çağı gibi gerekçeler göz önünde tutularak sınır hattının tashih ve ye-niden tesbiti zaruri mütalaa edilmiştir.

Aydın Hey'etinin mütalaa ettiği Eymir Köyünün aradığı mer'ayı bulamayacağı endişesi (Yahgiler Köyünün Gökçüler mahallesi halkına ait mezru arazi içinde mer'a olmayacağı cihetle) varit görülmediğinden ve Köy Kanununun Köy sınırlarını tarif eden (4-5) maddesinde açıkça ifade edildiği gibi Gökçüler mahallesi halkına ait mezru arazinin kendi hudut-ları içinde bulunması tabii bulunduğundan ve on altı bine ay yakın hay-yanları sulamak gibi hayati zaruret ve icaplar dolayısıyla Yahgiler - Eymir sınırının; Seki Yahgiler sınırının sona erdiği Çakıcı Ali tarlasın-dan bağliyerek Kuyruklu Göle ve buradan Kayatespesinden göle bakan burnu istikametinde Gökçülüne doğru müstakim bir hat olarak her iki tarafta kalan sulak ve mer'alarından tam fların birbirinden ortaklaşa istifade etkerinin muvafık görülmesi,

4- Denizli Vilayeti Genel Meclisinin 22/Aralık/1951 Gün ve 33/1313 sayılı mütalaaında ise;

Yahgiler - Eymir köyleri arasında Karma Kurulca bir anlaşmaya varılmamağ ise de; raporda belirtildiği gibi Eymir sınırının Yahgiler köyünün Gökçüler mahallesi evlerinin duvarlarına kadar uzaması, Gökçü-ler mahallesi halkının Eymir sınırı içinde kalan sahada bulunan tapulu tapusuz mezru arazilerinden faydalanmak maksadıyla bu saha ile alakalı bulunmaları dolayısıyla bu köyler arasındaki ihtilafların halledilmiş olmayacağı cihetle, sınır hattının yeniden tashih ve tesbiti zaruri mü-talaa edildiğinden Aydın Hey'etinin dermeyer ettiği Eymir köyünün 10-zumlu mer'ayı bulamayacağı endişesi (Yahgiler köyünün Gökçüler mahalle-si halkına ait mezru arazi içinde mer'a olmayacağı cihetle) varit gö-rülmediğinden ve Köy Kanununun Köy sınırlarını tarif eden 4 ve 5 inci maddesinde açıkça ifade edildiği gibi Gökçüler mahallesi halkına ait mezru arazinin kendi hudutları içinde bulunması tabii ve zaruri bulun-duğundan ve bir köye ait onaltı bine varan hayvanlarını sulamak gibi hayati zaruret ve icaplara dayanan gerekçeler dolayısıyla Yahgiler-Ey-mir sınırının (Seki-Yahgiler sınırının sona erdiği Çakıcı Ali tarlasın-dan bağliyerek Kuyruklu Göle buradan Kayatespesinden Göle bakan burnu istikametinde Gökçülüne doğru müstakim bir hat olarak mütalaa edildiği,

5- Anlaşmazlık hakkında her iki Vilayet Yetkili Kurulları aynı ayrı noktalar nazar ileri sürmeleri üzerine olayın merkezden gönderilecek mahsus bir Hey'ete incelemesi vekalet makamınca uygun görülmeğ ve iş-bu hey'etin mahallinde yaptığı tetkikat sonunda tanzim ettiği raporda;

Denizli Vilayeti Tavas Kazasının Kızılcabölük nahiyesine bağli Yahgiler Köyü ile, Aydın Vilayetinin Karacasu kazasına bağli Seki ve Eymir köyleri arasındaki hudut ihtilafı, dolayısıyla iki Vilayet arası sınır anlaşmazlığı mahiyetinde görölerek Vekaletin 25/5/1953 Gün ve 22104/C-1 sayılı emirleriyle Hey'ete tevdi edilen buna ait dosya ve iki Vilayette mevcut kayudat vesaik tetkik edilerek davete icabet eden Yahgiler ve Eymir köyleri ihtiyar Hey'etleri huzurunda ihtilafli mahal-de gerekli incelemenin yapıldığı,

Aydın ve Denizli Vilayetleri temsilcilerinden mürekkep Karma Kurulun ihtilafli mahalde 28/5/1950 tarihinde yaptıkları tetkikat neti-cesinde tanzim ettikleri tutanakta;

Aydın Vilayetine bağli Seki köyü Denizli Vilayetine bağli Yahgi-ler köyü arasındaki sınırın (Babadag silsilesinin en yüksek noktadan)

030 | 11 | : | 241 | 33 | 19

bağlayarak tahminen cenuba doğru bir hattı müstakim ile serhoğun kahvesi denilen Yıkık Kahve mahalline ve oradan bir zaviye ile batıya doğru kıvrılarak kestanelik denilen mevkideki Çakıcı Ali Tarlasının tam ortasındaki noktada bitmek üzere çekilen hattın) iki köy ve dolayısıyla iki Vilayetin bu bölgede sınırlarını teşkil etmesine, Aydın Vilayeti Daimi Komisyon Üyesi ile Seki köyü muhtarının muhalefetine karşı ekseriyetle kabul edildiği açıklanmış ise de Aydın Hey'etinin İl İdare Kurulu Başkanlığına verdiği 28/6/1950 tarihli raporda; Denizli Hey'eti ile 28/5/1950 günü yapılan incelemede; Seki, Eymir ve Yahşiler köylüleri arasında geçen kavga dolayısıyla Köy İhtiyar Hey'etleri ve köylerin hudutnameleleri üzerinde inceleme yapılmasına imkan bulunmadığı ve daha ziyade Yahşiler Köyünün istekleri üzerinde durularak hududun tevsiî cihetine gidildiği ve durumu ileride anlaşma mümkün olamayacağı ve daimi ihtilaflara sebebiyet vereceği açıklanmak suretiyle Karma Kurulun yeniden çizmek istediği hudut üzerinde anlaşamadıklarını tebarüz ettirmiş bulunmuşlardır.

Denizli Vilayeti Yetkili Kurulları Karma Kurulun raporu üzerine Seki ve Yahşiler köyleri arasındaki hududun kabulüne karar vermiş işler de Aydın Yetkili Kurulları iki köy arasında ve dolayısıyla iki Vilayetin bu bölgedeki sınırlarında bir ihtilaf bulunmadığı evvelce tesbit ve tapuya tescil edilmiş bulunan hududun muteber olduğu ve Yahşiler Köyünün ancak arazi tevsiî talebinde bulundukları tebarüz ettirilerek talebin reddine karar verdiği anlaşılmaktadır.

Hey'etin yaptığı incelemede; Yahşiler Köyünün, Seki ve Eymir Köylerine nazaran daha vasi bir arazi üzerinde beger, onar evden müteekkil ve birbirine oldukça uzak bir çok mahalleler halinde kurulmuş bulunduğu görülmüştür. Arazilerin darlığı ve hayvanlarını besleyecek imkanlara sahip olmadıkları yolundaki iddiaların müşahadelerimize aykırı bulunmaktadırlar. Yahşiler Köyünün bugüne kadar devam eden durumda sınır tashihini gerektirecek bir hal olmadığı ve bilakis böyle bir değişikliğin Sekiler Köyünün sınırlarını daraltarak ihtiyaçlarını tazyik edeceği muhakkak bulunmuştur. Müsterek otlak ve sulak haklarının eskisi gibi devam ve 1931 yılındanberi tatbik edilmiş ve fiyili durumda bu şekilde teessüs etmiş olan mevcut hududun değiştirilmesine lüzum bulunmadığı kanaatine varılmıştır.

Eymir Köyü ile, Yahşiler köyü arasındaki sınır ihtilafına gelince:

Ne Karma Kurulun ve ne de Yetkili Kurulların üzerinde anlaşamadıkları bu sahada Eymir Köylerinin talep ettikleri hudut hattının hakikaten Gökçüler mahallesinin çok yakınından geçmesine ve Eymir Köyünün Seki köyü ile hududu da Kuyruklu Gölde nihayet bulmasına göre buradan Dut Deresine doğru 3 Klm. içeri girerek mahallenin yanına kadar gelmesi ve Dut Deresinden Ahmedin olduğu tepeye kadar mevhum bir hat üzerinde uzanması iki Vilayet arasında sınır teşkil edemeyecek vasıfta ve daimi ihtilaflara yol açacak durumda görülmüştür.

Bu bölgede ihtilafli sahanın Yahşiler köyüne çok yakın ve Eymir Köyüne de sekiz - on Klm. mesafede bulunduğu ve aynı yerde mevcut bütün tarhaların Yahşiler köylüleri tarafından ekilip biçilmekte olduğu da müşahade edilmiştir.

Bu itibarla Eymir ve Yahşiler köylerinin ve dolayısıyla iki Vilayetin bu bölgede hududun: Seki, Eymir ve Yahşiler Köylerinin müsterek sınır noktası olan Kuyruklu Gölde bağlayarak ekli krökide gösterildiği üzere (Kuyruklu Göl, Tepe Göl, Burunkaya, Göge Bakan bala hatları üzerinden Gök Gölletenmiş deresinde nihayet bulması) hem tabii bir hududun tesisine ve hem de mahalle yanına yanbağında iktisap edilmiş fiyili hakların korunmasına sebep teşkil edeceği düşünülerek Yahşiler ve Eymir köylerinin ve dolayısıyla Aydın ve Denizli Vilayetlerinin bu bölgedeki hudutlarının yukarıdaki şekilde tashihinin muvafık olacağı kanaatine varıldığı ,

030	11	1	241	33	19
-----	----	---	-----	----	----

Vekaletimizce yapılan incelemede; Merkezden giden Hey'etin raporu da nazarı itibare alınarak, tarafların diğer taraf sınırı içinde kalan genel ve özel hakları şaklı kalmak şartıyla ve ilişik krokisinde gösterildiği veçhile iki Vilâyet arası sınır;

(Kuyrukluğöl, Tepe Göl, Burunkaya, Göğebakan Salâ Hatları Üzerinden Gök Gölleten Ağıl deresinde nihayet bulan hat) olarak tesbiti yerinde görülmüş ve işlemi de il İdaresi Kanunu hükümlerine uygun bulunmuş olduğundan, ilişik kararı ona göre düzenlenmiştir.

B. TURKISH SUMMARY / TÜRKÇE ÖZET

Köylülük, 20. yüzyıldaki endüstriyel gelişmelerin dönüştürücü gücünü toplumdaki diğer sınıflardan daha fazla hissetmiştir. Modernitenin geleneksel yapılar üzerindeki etkileri daha çok köy düzeyinde kendini göstermiştir. Çin'den Rusya'ya, Latin Amerika'dan Uzak Doğu'ya kadar siyasi sistemler köy hayatındaki bu değişimden ciddi şekilde etkilenmiştir. Cumhuriyet rejiminin Osmanlı İmparatorluğu'ndan devraldığı demografik yapıyı göz önünde bulundurarak bu küresel dönüşümün Cumhuriyet yönetimini nasıl etkilediği bir başka soru olarak ortaya çıkmaktadır. Köylülerin, toplam nüfusun %80'ini oluşturduğu bir demografik yapıda, devlet aygıtının köye yönelik idari politikalarını inceleyerek bu durum daha net anlaşılabilir. Cumhuriyet rejimi, 1924 yılında çıkardığı Köy Kanunu'ndan da anlaşılacağı üzere köyün yapısı ve işleyişi gibi meselelere büyük önem vermiştir. Bu kanunun öncelik verdiği konulardan biri de köy sınırlarının belirlenmesidir. Cumhuriyet yönetimi köy hududu ihtilaflarına müdahale ederek devlet aygıtını, bir anlamda, kırsal mekanda örgütlemeye çalışmıştır. Kanun, Cumhuriyetin kuruluşundan hemen sonra çıkarılmış olmasına rağmen, devlet arşivlerinde sınır anlaşmazlıklarına ilişkin bulunan en eski belge 1943 yılına aittir. Bu nedenle incelemeye 1940'lı yıllardan başlamak tercihten öte materyal bir gereklilik halini almıştır. Bu araştırma Demokrat Parti iktidarının son bulduğu 1960 yılına kadar olan dönemi kapsamaktadır.

1943-1960 yılları, çok partili siyasetin uygulanması açısından Cumhuriyet tarihinde bir geçiş dönemi olarak kabul edilebilir. İkinci Dünya Savaşı sonrası uluslararası piyasada tarım ürünlerinin fiyatlarının artması ve Marshall Planı ile tarımda makineleşmenin hızlanması kırsal alanlarda ekilebilir arazi talebini artırmıştır. Bu talep sonucunda ortak kullanıma açık arazi ve doğal kaynaklar konusundaki anlaşmazlıkların sayısı da ciddi bir artış göstermiştir. Tarımsal üretim üzerindeki ekonomik baskı ile eş zamanlı olarak köylere yönelen demokratik siyaset biçimi, köylüleri ve köy alanını popülist politikaların odak noktası haline getirdi. Bu tez, tam da bu noktada, Cumhuriyet bürokrasisi ve köylüler arasındaki ilişkinin kırsal mekân üzerindeki yansımalarını incelemektedir. Bunu yaparken, ilk olarak bürokratik aygıtın

kırsal mekanı idari açıdan düzenlerken başvurduğu metot ve bu süreçlere etki eden faktörler incelenmiştir. İkinci olarak ise, yerelden gelen ekonomik temelli doğal kaynak ve arazi paylaşım taleplerine bürokratik aygıtın ne derece yanıt verebildiği incelenmiştir.

Bu tezin araştırma sürecinde bir tür nitel araştırma tekniği olan Temellendirilmiş Kuram kullanılmıştır. Arşiv kaynakları nispeten standart bir formatta olsa da, her birinin sahip olduğu karmaşık ve farklı anlaşmazlık biçimleri göz önüne alındığında, tündengelimden ziyade tümevarımcı bir yaklaşım olan Temellendirilmiş Kuram'ın neden tercih edilmesi gerektiği anlaşılabilir. Arşiv kaynaklarını önceden var olan kavramsal bir bakış açısıyla değerlendirmek yerine, öncelikle kaynakların derinlemesine incelenip çapraz okumalar yapılarak bir veri kümesinin oluşturulması ve bu veri kümesine dayalı teorik bir çerçevenin geliştirilmesi Temellendirilmiş Teori'nin ayırt edici bir özelliğidir. Bu nedenle Temellendirilmiş Kuram metodolojisi, öncelikle eldeki verilerin sistematik analizini, analiz sürecinde karşılaşılan kavramların kategorize edilmesini, bu kategoriler arasındaki ilişkilerin belirlenmesini ve son olarak da ilgili kategorilerden oluşturulan bir açıklamayı öngörmektedir. İlgili tüm bu analiz sürecine “Sürekli Karşılaştırmalı Yöntem” denir. Bu yöntemle göre araştırma materyali Açık, Eksen ve Seçici kodlama olmak üzere üç aşamalı bir kodlama döngüsüne tabi tutulur. Bu üç aşamada gerçekleştirilen kodlama işlemi ile elde edilen kod matrisleri rafine edilerek araştırılan konunun ana hatları belirlenir. Bu tez, bilgisayar destekli nitel veri analizi için tasarlanmış bir yazılım programı olan MAXQDA'yı kullanarak bu üçlü kodlama adımlarını 265 farklı arşiv belgesine uygulamıştır. Bu sınıflandırma sürecinin bir diğer kritik aşaması, her bir arşiv kaynağı için açıkça oluşturulan memolardır. Bu memolar, örneklerle ilgili kısa ve açıklayıcı notlardan oluşur. Tüm kodlama sürecinden sonra elde edilen notların çapraz okunması, bürokratik yaklaşımın kategorize edilmesinde metodolojinin bir diğer kritik noktasını oluşturmuştur. Kod sisteminin iyileştirilmesi ve memolar arasında çapraz okumalar ile temelde farklı iki bağlam ortaya çıkmıştır. Birincisi, köy sınırlarının belirlenmesinde bürokrasinin kullandığı yöntem ve faktörlerdir. Bu yöntemler ve faktörler üç alt başlığa ayrılmıştır: İdari, Coğrafi ve Sosyo-Ekonomik çerçeveler. İkincisi, bürokrasinin karar alma mekanizmalarıdır. Bu mekanizmalar Geo-İdari ve Yerel-Ekonomik perspektifler olarak ikiye ayrılmaktadır. Tüm bu üst ve alt başlıklar, tüm arşiv kaynaklarının, daha fazla kategorik açılım gerektirmeden işlenebilmeleri

nedeniyle, Temellendirilmiş Teori metodolojisinin uygulanmasını kolaylaştıracak şekilde incelendiğini göstermektedir. Ayrıca bu tezde kullanılan tüm istatistiksel tablolar kodlama sisteminden elde edilen verilerdir.

Bu tez kapsamında incelenen sınır tayin raporları Devlet Arşivleri Başkanlığı Cumhuriyet Arşivinde bulunan Başbakanlık kataloğuna bağlı Bakanlıklararası Tayin Daire Başkanlığı fonunda yer almaktadır. Sözkonusu sınır tayin raporları, İçişleri Bakanlığı'na bağlı İller İdaresi Genel Müdürlüğü tarafından hazırlanmıştır. İlk örneği 1943 yılına dayanan sınır tespit raporları 1983 yılına kadar takip edilmektedir. Bu tezin kapsamını oluşturan 1943-1960 yılları arasında 598 adet köy sınır tespit raporu bulunmaktadır. Nitel analize tabi tutulan rapor sayısı, bu raporlar arasında ön inceleme yapılarak 265'e düşürülmüştür. Bu ön elemanın sebebi çoğu sınır belirleme raporunda sınır anlaşmazlıklarının nedenleri ve bürokratik karar alma prosedürleri hakkında çok az ya da hiç bilgi verilmiyor oluşudur. Bu raporlar nitel analize katkıda bulunmak için gerekli içerikten yoksundur. Ancak nitel araştırma sürecine dahil edilen 265 sınır belirleme raporu, köyler arasındaki sınır anlaşmazlıkları ve bürokratik sürece ışık tutan mevcut ifadeler hakkında ayrıntılar içermektedir. İncelenen arşiv kayıtları, belge formatı bakımından esas itibarıyla aynıdır. Gerekçeli Karar bölümünde sırasıyla anlaşmazlığın tarihsel arka planı ve sebepleri, iki il yönetim kurulunun karşılıklı talep ve iddiaları, çizilecek sınırın belirlenmesi için merkezden gönderilen karma kurulların açıklamaları ve sabit topografik noktalardan geçen sınırı sözlü ifade biçimiyle tarif eden betimlemeler yer almaktadır. Her arşiv evrakının içinde sözkonusu sınırla birlikte karşılıklı talepleri de gösteren basit bir kroki de yer almaktadır.

Cumhuriyet dönemi köyleri arasındaki sınır anlaşmazlıkları konusunda çok az çalışma bulunmaktadır. Mevcut literatür kabaca iki kategoriye ayrılabilir. İlk kategori, dönemin bürokratik kadrolarından özellikle kaymakamlar ve vali yardımcılar tarafından Türk İdare Dergisi'ne yazılan yazılardır. Bürokratik literatürün bu kategorisine, 50'li yıllarda yargı mensuplarınca köy orta malları üzerine yazılan bir başka çalışma da dahil edilebilir. İkinci kategori ise deneyimsel perspektif yerine bilimsel ve analitik niteliğe haiz çalışmalardan oluşmaktadır

Türk İdare Dergisi'nde yayınlanan birinci kategorideki makaleler, yerel bürokratik kadroların idari süreçleri kendi aralarında tartıştıkları metinler olarak görülebilir. Bu

kaynaklar bilimsel değildir, bunun yerine idari bir bakış açısıyla yazılmıştır. Buna rağmen, araştırmadan çok deneyime dayalı bu metinlerle eleştirel bir mesafe kurulabilirse, sınır çatışmalarının çözümlenmesi için değerli bilgiler sağlarlar. Bu literatürde, köyler arasındaki sınır anlaşmazlıklarının sebebinin temel olarak iki farklı perspektifle değerlendirildiğini söylemek mümkündür. İlk perspektifi dönemin ekonomik ve politik dönüşümlerine atıfta bulunan değerlendirmeler oluşturur. Buna göre, II. Dünya Savaşı sonrası küresel ölçekte yaşanan tarımsal ürün fiyatlarındaki artış ve Marshall Planı ile tarımda makineleşme sürecinin artmasıyla tarım arazilerine olan talebin artması müşterek kullanım alanları olan arazilerin işgal edilmesi sonucunu doğurmuştur. Yasalar arasındaki karmaşa, yereldeki bürokratik kadroların yetersizliği ve devletin kadastral gücünün tam olarak inşa edilememiş olması gibi durumlar, devlet aygıtının kırsal mekan üzerindeki kontrolünü etkin bir biçimde sağlayamamasına yol açarak bu ekonomik ve politik dönüşümlerin yarattığı yerel anlaşmazlıklara yerinde ve hızlı çözümler sunamamıştır. Bu ilk perspektifin, bürokratlarca devlet aygıtının altyapısal iktidarına yaptığı bir eleştiri olarak görülmesi yanlış olmayacaktır. Bürokratik yazındaki ikinci perspektif ise devlet aygıtını ve onun inşa ettiği yasal çerçeve ve uygulamaları eleştirmek bir tarafa, köylüleri hedef tahtasına oturtturarak meseleyi anlamayı tercih etmiştir. Bu yaklaşıma göre köylüler, idari sınır kavramını anlayamayacak kadar cahil, aynı zamanda bir metrelik lehte ya da aleyhte sınır derinliğini ciddi bir kazanç ya da kayıp meselesi olarak değerlendirecek kadar açgözlülerdir. Bu yaklaşım, idari sınır kavramının doğal kaynaklara erişim limiti olmadığını köy toplumu tarafından idrak edilemediğini özellikle belirtir. İdare Dergisi'nde var olan bu çalışmalara bir ek yapmak da yerinde olacaktır. Ali Arcak ve Tefik İmsel'in idari sınır anlaşmazlıkları üzerine yaptıkları çalışma, yargı mensuplarının bu anlaşmazlık türüne olan yaklaşımlarına güçlü bir örnek oluşturur. Yargı kararları örneklerine dayanan bu çalışma da, bu tezin iddiasının aksine, doğal kaynak temelli paylaşım anlaşmazlıklarını, idari sınır anlaşmazlığı bağlamında değerlendirmiş ve son derece hukuki bir anlatımla anlaşmazlıkların yasal zeminini değerlendirmeyi öncelikli amaç edinmiştir. Bu çalışma, her ne kadar mera ve orta malları anlaşmazlıklarına yoğunlaşsa da, sınır anlaşmazlıklarını idari niteliğe indirgemekten öteye geçememiştir. Bu bahsedilen literatür bilimsellikten ziyade mesleki deneyime dayanmakta ise de sunduğu perspektif, bürokratik kadroların sınır

anlaşmazlıkları hakkındaki düşünme biçimlerini ortaya koymak açısından yol gösterici niteliktedir.

İkinci kategorideki literatür, mesleki deneyimden ziyade bilimsel araştırma perspektifine sahip olsa da, sayıca çok yetersizdir. İlk çalışma, Ankara Üniversitesi Siyasal Bilgiler Fakültesi'nde görevli 30'a yakın araştırmacı tarafından yürütülmüştür. 1955-57 yılları arasında yürütülen bu çalışma, valiler ve kaymakamlara yöneltilen anketlerden elde edilen verilerle biçimlenmiştir. Köy sınır anlaşmazlıkları, bu çalışmanın önemli alt başlıklarından birini oluşturmaktadır. Kamu görevlilerinin bu anlaşmazlıklar konusunda verdikleri bilgiler sistematik hale getirilip çeşitli istatistikler oluşturulmuştur. Bu veriler, tezin nitel araştırma yöntemiyle ulaştığı istatistiki verilerle uyum içerisindedir ve bu açıdan bir nevi karşılaştırma zemini sunması sebebiyle değerlidir. Bir diğer çalışma da Osman Gümüştü'ye aittir. Görece daha yeni olan bu çalışma, köy sınır anlaşmazlıklarını erken modern Osmanlı İmparatorluğu'ndan Cumhuriyet'e kadar ele almaktadır. Sınır belirleme sürecinin, iki devlet yapısı için de ne derece önemli olduğunu ortaya koyan bu çalışma, köy sınırı kavramının ve sınır belirleme süreçlerinin iki farklı devlet aygıtında da benzer olduğundan hareketle, bir sürekliliğe işaret ettiğini ortaya koyar. Öte yandan Gümüştü'nün odak noktası ağırlıklı olarak Osmanlı İmparatorluğu'ndaki pratiklerdir. Cumhuriyet dönemindeki uygulamalara daha az yer vermekte ve betimsel yaklaşmaktadır. Özellikle Cumhuriyet dönemi pratiklerine odaklanan bu tez, Gümüştü'nün alanında tek olan çalışmasına daha analitik bir perspektifle katkıda bulunmaya çalışmıştır.

Bu tezin ilk bölümü, köy sınırlarını belirleme sürecinde bürokrasi tarafından kullanılan metot ve faktörleri İdari, Coğrafi ve Sosyo-Ekonomik alt başlıklarında incelemektedir. İdari çerçeveyi oluşturan ana unsur Cumhuriyet dönemince üretilen yasal çerçevedir. 442 sayılı Köy Kanunu, 1924 yılında ortaya konmasıyla, devlet aygıtının kendisini hukuki düzlemde inşa eder etmez kırsal alanı örgütleme çabasına giriştiğinin en açık kanıtıdır. Bu kanun, temel olarak köyün tarifini yaparak başlamakta ve esas olarak köy sınırlarını belirleme prosedürünü ortaya koymaktadır. Merkezden gönderilen tahkikat komisyonlarının ve yerel il idare kurullarının sınır anlaşmazlıkları konusunda ürettikleri argümanlar temel olarak bu yasal çerçeveye dayanmaktadır. Köy sınırlarının mümkün olduğunca topografik düzleme uygun olması gerektiğini öngören bu yasa, bir nevi devlet aygıtının coğrafi kaygılarının en net ifadesidir. Bunun dışında,

köy orta mallarının dağıtılma pratiğini de düzenlemeye çalışan kanunun en önemli noktalarından birisi de dışlayıcı pratikler yerine köylülerin ortak kullanımına açık olan alanlara erişimini koruyarak geçimlik ekonomiye verdiği önemdir. Her köyün birbiriyle olan sınırlarının yasal geçerliliğe haiz olmasını, karşılıklı onay alma yani uzlaşma şartına bağlayan bu yasa, yereldeki bu köklü anlaşmazlıkları çözme işini bir bakıma köy toplumunun kendisine bırakmışsa da bunda başarılı olamadığı açıkça ortadadır. Anlaşmazlıkların çözümlerinde referans verilen bir diğer yasal çerçeveyi 4025 ve 5442 sayılı Vilayet İdaresi Kanunları oluşturmaktadır. Bu kanunlar, esas olarak köy sınırlarını düzenlemeseler de köy sınır anlaşmazlıklarının vilayet sınırlarını ilgilendirdiği ölçülerde bürokrasinin referans vermesi gereken yasal çerçeveyi oluştururlar. Bu iki ana yasal zemine ek olarak, 4081 sayılı Çiftçi Mallarını Koruma Kanunu, 5618 sayılı Çiftçiyi Topraklandırma Kanununa ek Kanun, 2644 sayılı Tapu Kanunu ve 2613 sayılı Kadastro ve Tapu Tahrir Kanunu bürokrasinin sınır belirleme süreçlerinde kullandığı başka faktörleri oluştururlar. Burada vurgulanması gereken esas nokta, bu yasal çerçevelerin, bürokrasinin doğal kaynakları köyler arasında adil bir biçimde dağıtma şansı elde edemediğinde kendisine meşru zemin yaratma fırsatı sunmalarıdır. Orman kanunları da bu bağlamda ormanlık arazi üzerindeki hak taleplerinde aynı bürokratik saiklerle kullanılmıştır. İdeal bir doğal kaynak dağılımı yapılamadığı örneklerde, merkezi heyetler görev ve sorumluluklarının vilayet idaresi kanunu çerçevesinde belirlendiğini belirterek, bu yasal çerçevelere atıfta bulunma yoluyla, sorunun çözümünü adli makamlara havale etmişlerdir. Yasal zeminin kendi içerisinde barındırdığı çelişkilerden faydalanan bürokratik aygıt, bazı karmaşık anlaşmazlık durumlarında esas sebepleri yüzeysel bir biçimde tarif etmiş ve meseleleri idari sınır kavramına tahvil etmişlerdir. Bu yasal çerçeveler, karmaşık mülkiyet ve intifa haklarının var olduğu örneklerde bürokratik kadroların hangi metotları kullandıklarını anlamak açısından son derece yol göstericidir. İdari çerçevenin bir diğer önemli unsuru güvenlik konseptine verilen referanstır. Bu referans iki şekilde anlaşılabilir: doğrudan ve dolaylı güvenlik kaygısı. Doğrudan güvenlik kaygısı, çizilen sınır hattının yerel coğrafyada kolluk güçlerinin manevra kabiliyetlerini ne derece etkileyeceğini göz önüne almaktadır. Buna ek olarak, bölge karakollarının civar köyleri kontrol altına alma gücünü kırmayacak sınır hatlarında ısrar edildiği de gerekçeli kararlarda göze çarpmıştır. Artvin ve Hakkari illerindeki iki farklı sınır anlaşmazlığında bu kaygıların açıkça belirtilmiş olması, devletin engebeli

ve merkeze uzak kırsal yerleşimler üzerindeki doğrudan güvenlik kaygısını ortaya koymaktadır. Dolaylı güvenlik kaygısı da, doğal kaynaklar üzerinde adil paylaşımın mümkün olamadığı örneklerde, merkezi heyetlerin gelecekte köyler arasındaki muhtemel asayiş problemlerine dikkat çekmek ve önlem alınmasını sağlamak amacıyla yaptığı uyarılara denk düşmektedir. Doğrudan güvenlik kaygısı politik bir zemine işaret ederken, dolaylı güvenlik kaygısı yerel ekonomik zemine işaret etmektedir. Yasal zeminlerin farklı örneklerde farklı amaçlarla kullanılması ve güvenlik noktasında gösterilen hassasiyetin niteliği, idari çerçevenin temelini oluşturur.

Coğrafi çerçeve metot ve faktörlerin ikinci alt başlığıdır. Coğrafi çerçevenin önemi, köyler arasındaki sınır hatlarının uyum içerisinde olması yaklaşımının, devletin kırsal mekanı domine etme ihtiyacından kaynaklanmaktadır. Coğrafi çerçeveyi iki alt başlıkta incelemek mümkündür. İlki fiziksel ikincisi beşeri coğrafyadır. Fiziksel coğrafya, sınır hatlarının topografik düzlemle uyum içerisinde olması çabasını tanımlar. Yasal çerçeveye sabit olan durum, köyler arasındaki sınırların yeryüzü şekillerine göre belirlenmesi zorunluluğudur. Bürokratik mekanizma, topoğrafik uyumluluğu birçok örnekte kaybetmemeye özen gösterse de bazı özel durumlarla karşılaşması kaçınılmazdır. Anlaşmazlık bölgelerinin engebesiz ve dere, tepe gibi bazı doğal ayırıcı coğrafi hatlardan yoksun olması bu durumun bir örneğidir. Bu gibi hallerde, bürokratik kadrolar, yapay belirteçler kullanarak sınır hattını düz bir hat şeklinde belirlemeyi uygun görmüşlerdir. Bunu yaparken yer değiştirilmesi zor olan ağır sınır taşları ve sabit kazıklar kullanılmıştır. Ancak göl ve akarsu gibi, havzası ve debisi mevsimsel periyotlarla değişebilen bölgelerde çizilen sınır hatları daha büyük sorunlara yol açması sebebiyle üzerinde özenle durulan alanları oluştururlar. Bu tarz alanlarda da yine mevsimsel olarak değişikliğe uğramayacak sabit noktalar belirlemek bürokratik bir yöntem halini almıştır. Suğla gölü civarındaki örnekler bu gibi durumlardaki bürokratik yaklaşımların güçlü bir örneğini oluşturması açısından önemlidir. Fiziksel coğrafyayı kapsayan bir diğer metot ise mesafe kavramıdır. Üzerinde uzlaşamayan arazilerin aidiyetini tespit etmeye çalışan bürokratik kadrolar, bu arazilerin iki köy merkezine olan uzaklıklarını bazen zaman (1,2 saat vb.) bazen uzaklık (1,2 km vb.) ölçülerini kullanarak tespit etmeye çalışmış ve bu veriler üzerinden sınır tespiti yapmaya çalışmışlardır. Bu sadece bürokratik kadroların uyguladığı yöntem değil, aynı zamanda yerel il idare kurullarının iddialarını

güçlendirmek amacıyla başvurdukları bir veri türüdür. Devletin hegemonik gücünü sağlayan sınır hattının topografik olması gerektiği açıktır. Bunun mümkün olamadığı durumlarda, bürokratik mekanizmalar büyük ölçüde mekansal sabitlikleri yapay olarak inşa etmek yoluyla problemi çözmeye çalışarak fiziksel coğrafya kategorisini oluşturmuşlardır. Fiziki coğrafyanın yanı sıra beşerî coğrafya da karar vericiler için önemli bir faktördü. Beşerî coğrafya terimi bu tez bağlamında, yerel halkın çevrelerindeki topoğrafya ile ilişkisini ve bürokratik aygıtın bu duruma yaklaşımını kapsamaktadır. Yer isimleri uyumsuzlukları ve ehl-i vukuf'un rolü beşerî coğrafyayı belirleyen ana unsurlardır. Köylülerin topoğrafik yapılarla ilişkisi, yerel bölge adları ve bunlar aralarındaki tutarsızlıklar üzerinden okunabilir. İdeal bir sınır tanımı, bölgede yaşayan herkesin üzerinde anlaştığı yer adlarını kullanmak zorundadır. Aynı coğrafi arızalara anlaşmazlığın tarafları tarafından farklı adlar verilirse, çizilen sınır hattı her şekilde tartışmaya açık olacak ve çatışmaların önüne geçilemeyecekti. Bu nedenle yerel topoğrafyayı yerel halk tarafından kabul edilen dil ile tanımlayamayan resmi bir heyet ve bu topografik yapıların isimlendirilmesinde anlaşılamayan köylüler sınır belirleme mekanizmasını ciddi şekilde bozabileceklerdi. Soyut bir örnek vermek gerekirse, bir köy arazi üzerindeki alana A tepesi, diğer köy aynı alana B tepesi diyorsa, bu tepeden hareketle çizilecek sınır iki taraf için de anlaşmazlıkların devamı anlamına gelecektir. Resmi heyetler, sınır çizerken bu tür isim tutarsızlıklarına azami dikkat gösterdiler. İl idare kurulları arasında anlaşma zemini sağlanamayınca merkezden gönderilen heyetin bölge hakkında detaylı bir inceleme yapıp karar verdiğini belirtmiştik. Bu inceleme sürecinde merkezi bürokrasiye yardımcı olan en önemli organ ehl-i vukuftur. Ehl-i vukuf, hukuki ihtilaflarda ve ispat gerektiren durumlarda özel veya teknik bilgisi başvuru alan üçüncü kişiler olarak tanımlanabilir. Genel olarak Türk hukuk sisteminde bilirkişilik ile eşdeğer kabul edilmektedir. Ehl-i vukuf, anlaşmazlık yaşayan köylerde ikamet eden, yerel coğrafyanın geçmiş ve bugünkü topoğrafik ve mülkiyet ilişkilerine hâkim olan orta yaş kişilerden oluşmaktaydı. Bu kişiler, yerel coğrafyaya dair bilgiye sahip olmayan merkez idare kurullarının yereldeki en önemli bilgi kaynağını oluştururlar. Ehl-i vukuf bu açıdan merkez heyetlerin yereldeki gözü olarak değerlendirilebilirler ve sınır hattı tespiti sürecinde son derece etkilidirler. Bu açıdan düşünüldüğünde, beşerî coğrafya öğelerine başvurulmadan çizilecek sınır hatlarının anlaşmazlıkları çözme noktasında son derece zayıf kalacağı ve bu durumun da bürokratik yükü daha fazla artıracığı göz

önünde bulundurulmalıdır. Yerele dair kısıtlı bilgilerle tepeden inme bir biçimde işletilecek karar mekanizmaları, beşerî coğrafyaya ait metotlar kullanılarak rafine edilmekte ve yerel durumla uyumlu bir nihai karara varılmaktadır.

Sosyo-ekonomik çerçeve de sınır belirleme sürecinde bürokrasinin başvurduğu bir diğer yöntemler bütünüdür. Bu çerçeve ise öteden beri kavramı, insan ve hayvan nüfusu ve zirai asayiş olarak temelde üç alt başlık altında incelenmiştir. Öteden beri kavramı ile hem bürokrasi hem köylülerin ifade etmek istediği şey, herhangi bir doğal kaynağın kullanım hakkının hukuki olarak olmasa da fiili olarak bilinmeyen bir geçmişe kadar dayandığıdır. Uzun bir geçmişi olan bu fiili hak, bugünkü talebin meşruiyetini sağlamak açısından son derece önemlidir. Bürokratik aygıt da hem kendi kararını meşrulaştırırken hem de hak taleplerini incelerken bu kavrama verilen referansları göz önünde bulundurmadan çekinmemiştir. Bu kavrama verilen referanslar, genellikle adil bir biçimde dağıtılamayacak bir doğal kaynağa erişimi kısıtlamamak amacını taşımıştır. Bu açıdan geçimlik ekonomi modelini bozmak istemeyen devlet aygıtının varlığını göstermektedir. Buna ek olarak, hem il idare kurulları hem de merkezi kurullar, sınır hattına dair argümanlarını kurarken, köylerin sahip oldukları insan ve hayvan nüfusuna da özel önem vermişlerdir. Köyler arasında anlaşmazlık konusu olan kaynakların dağıtımını esnasında, anlaşmazlığa taraf köyler arasındaki nüfus ve doğal kaynak dengesinin gözetilmesi, arşiv belgelerinde sıkça rastlanan bir durumdur. Son olarak zirai asayiş kavramından bahsetmek sosyo-ekonomik çerçeveyi tamamlamak açısından faydalı olacaktır. 4081 sayılı Çiftçi Mallarını Koruma Kanunu kapsamında geliştirilen bu ifade, tarımsal üretimi verimli ve güçlü olan köylerin mahsullerini koruma kaygısıyla çizilen sınır hattını ifade eder. Bazı köylerin tarım ürünlerini korumak amacıyla inşa ettikleri altyapı sistemleri ve güvenlik ağları, diğer köylere göre daha gelişmiş olduğu anlaşmazlıklarda, verimlilik açısından değerli topraklar bu köylerin sınırları içerisinde bırakılmaktadır. Zirai asayiş kavramı, bürokrasinin ülkesel çapta ekonomik kaygılarını ifade eden bir kullanıma sahiptir.

Tüm bu yöntem ve faktörler bir arada değerlendirildiğinde, sınır çizme sürecinin çok katmanlı ve karmaşık bir süreç olduğu anlaşılabilir. Merkezi yasama faaliyetleri ile öngörülen sınır kavramı ideal ve soyut bir anlayışa işaret eder. Yerel uygulamalarda bu merkezi anlayışın katı ve karmaşık gerçeklerle uzlaştırılması gerektiği

söylenbilir. Bürokratik kadroların farklı yerel talepleri soyut yasal ve idari çerçeveye bütünleştirme çabası, sınır belirleme sürecinin ana temalarından birini oluşturmaktadır.

Bu tezin ikinci bölümü, idari sınır uyuşmazlıkları kavramının sorunlu ve bürokratik kadrolarca üretilmiş bir yaklaşım olduğunu iddia etmektedir. İki veya daha fazla komşu köy arasındaki anlaşmazlıklar esas olarak mera, yayla, kışlaklar, sulak alanlar ve bazen orman arazilerinin paylaşımı konusunda ortaya çıkmaktaydı. Bu tür doğal kaynaklar, köylülerin geçim ekonomisinin temelini oluşturmaktadır. Başka bir deyişle, bu kaynaklara ulaşılabilirlik, yeterlilik ve erişim kolaylığı kırsal nüfusun sosyo-ekonomik dengesini belirleyen en önemli faktördür. 1943-1960 yılları arasında arşivlere yansıyan 300 hudut tespit raporunun tamamına yakınının ekonomik değeri yüksek bu tür doğal kaynakların paylaşımındaki sorunlardan kaynaklandığı açıkça görülmektedir. Ancak bu çatışmalar devlet aygıtı tarafından idari sınır uyuşmazlığı bağlamında değerlendirilmiş ve bu alanı düzenleyen yasalar çerçevesinde çözüme kavuşturulmuştur. Bürokratik açıdan bakıldığında, bu anlaşmazlıklar sonucunda belirlenen sınırların idari nitelikte olduğu aşikâr olsa da, köylüler açısından talebin idari sınırın belirlenmesi değil, doğal kaynakların adil paylaşımı olduğu açıkça görünmektedir. İkinci bölüm, bürokratik aygıtın karar verme mekanizmasına odaklanmıştır. Bu mekanizmalar temel olarak iki alt kategoride değerlendirilmiştir. Birincisi, Geo-İdari perspektifidir. İkincisi ise Yerel-Ekonomik bakış açısıdır. Bu iki genel çerçeveyi ayrı ayrı tanımlamak gerekir. Geo-İdari bakış açısı, köylülerin kaynak paylaşımı talebini göz ardı ederek, arazinin topografik yapısına göre alınan kararları anlatır. Bu tür kararlar tamamen idari ve coğrafidir, dolayısıyla James C. Scott'ın modern devleti tasvir ederken kullandığı "tünel vizyonu" kavramını anımsatır. Scott, bu kavramla, yereldeki kompleks problemlere derinlemesine temas edemeyecek devlet aygıtının meselelere kendi işine yarayacak dar bir perspektifle yaklaşmasını ve kendi çözümünü üretmesini ifade eder. Yerel-Ekonomik perspektif ise sınır çatışmalarını adil kaynak tahsisi yoluyla çözmeyi amaçlar. Bunu yaparken, idari ve coğrafi bağlamdan feragat etmek zorunda olduğunun farkındadır. İncelenen tüm arşiv kaynakları, bürokratik karar mekanizmaları açısından bu iki kategoriden birine rahatlıkla uyum sağlamaktadır. Ancak, Geo-İdari perspektifin, sahadaki karar vericiler tarafından Yerel-Ekonomik perspektiften çok daha yoğun bir şekilde kullanıldığı açıkça belirtilmelidir. Yerel hak temelli anlaşmazlıkların bürokrasi eliyle idari sınır

anlaşmazlığı kavramına tahvil edilmesi, Geo-İdari perspektifin baskınlığını ortaya koymakta ve bu tezin bir diğer ana argümanını oluşturmaktadır. Bürokrasi ve yasal zemin arasındaki iş birliği, köylülerin kaynak paylaşımı taleplerini kendi bağlamlarının dışına çıkarmış ve devletin kendi idari haritasına sahip olma arzusunu tatmin etmek için değerlendirmelerini idari bir çerçeveye yerleştirmiştir.

Bütün bunlara ek olarak, bu tez, literatürün köylülerin Demokrat Parti yönetimi ile siyasi arenada daha görünür oldukları iddiasını bir ölçüde doğrulamaktadır. 1951 yılından itibaren sınır tespit raporlarındaki gözle görülür artış, sonlara doğru ivme kaybetmekle birlikte 1960 yılına kadar devam etmiştir. Ancak bu durumun başka birçok nedeninin de olabileceği açıkça belirtilmelidir. Bu nedenler, bu çalışmanın dayandığı arşiv belgelerinin açıklama gücünün ötesindedir. Öte yandan bu tez, başlangıçta köylülüğün geçim ekonomisi ve çatışmaların sosyo-kültürel ve sosyo-ekonomik boyutları hakkında daha ayrıntılı bilgi edinmeyi amaçlasa da arşiv belgelerinin yapısal yetersizliği nedeniyle bu mümkün olmamıştır. Bu durum, arşiv belgelerinin sınır tespit mekanizmasını tamamen idari boyutta ele almasından kaynaklanmaktadır.

Köyler arasındaki sınır anlaşmazlıklarına ilişkin belgelerin büyük çoğunluğu Tapu ve Kadastro Genel Müdürlüğü Arşivlerinde saklanmaktadır. Ancak bu kayıtların hiçbiri araştırmacıların kullanımına açık değildir. Bunun nedenlerinden biri, kırsal kesimde sınır anlaşmazlıklarının hala devam ediyor olmasıdır. Bu nedenle bu arşiv kayıtlarına ancak adli makamlar veya köy muhtarlarının talep etmeleri durumunda ulaşılabilmektedir. Mülkiyetin gizliliği ilkesinin ihlali iddiasıyla araştırmacılara kapalı olan bu kayıtlara erişilememesi, bu çalışmanın bir nevi eksik kalmasına neden olmuştur. Bu konuda yapılacak çalışmaların kırsal alanlardaki sınır anlaşmazlıkları konusunda daha bütüncül sonuçlar vereceğine şüphe yoktur.
